**The SPARC Architecture Manual** SPARC International, 1994 SPARC Scalable Processor Architecture is the industry's only openly defined and evolved RISC architecture Version 9 is the new 64 bit incarnation of SPARC the most significant change

since SPARC's introduction in 1987. Unlike other RISC (Reduced Instruction Set Computer) designs, SPARC specifies not a hardware implementation chip but an open standard architecture belonging to the community of SPARC vendors and users. The SPARC specification is defined by the SPARC Architecture Committee, a technical arm of the computer maker consortium SPARC International. Version 9 provides 64-bit data and addressing support for fault tolerance, fast context switching support for advanced compiler optimizations, efficient design for Superscalar processors, and a clean structure for modern operating systems. The V9 architecture supplements rather than replaces the 32-bit Version 8 architecture. The non-privileged features of Version 9 are upward compatible from Version 8, so 32-bit application software can execute natively without modification on Version 9 systems; no special compatibility mode is required. Publication of the Version 9 architecture marks a three-year development effort by SPARC International member companies from a broad cross section of disciplines.
