INTRODUCTION TO JAVA

A PROGRAM is a set of instructions a computer can execute to perform a task.

SYNTAX are rules that specify the basic vocabulary of a programming language, and states what can and cannot be used.

SEMANTICS refer to the meaning of a program. It's the way that the code behaves and the rules that govern how it operates.

COMMENTS are ignored by the computer. They are for human readers only. To make a large comment, use `/*`. To make many comments across multiple lines, use `/**` (starts with and ends with `*/`).

Command `System.out.println("Hello World");`

System.out

CLASS

`0001.L1.COM`

`/* A program to display the words "Hello World" on the console. */`

```
public class HelloWorld {
    public static void main() {
        System.out.println("Hello World");
    }
}
```

`/* End of class HelloWorld */`

STRINGS, OBJECTS, ENUMS AND SUBROUTINES

ENUM

An enum is a data type that can be created by a programmer to represent a small collection of possible values. An enum can be considered a class and its possible values are objects. Enums can be used to add a new type to the Java language.

SUBROUTINES

In Java, every subroutine is contained in a class or in an object. Some classes that are standard parts of the Java language contain predefined subroutines that you can use. Strings contains subroutines that can be used to manipulate that string. Strings are also known as **objects**. These subroutines are "built into" the Java language. A subroutine is a "black box" which can be used without knowing what goes on inside.

CLASSES

Classes in Java have (a) different functions.

1. A class can group together variables and subroutines contained in that class. This group is called **static members** of the class.

`0001.L1 public static void main(String[] args) {`

2. Classes are used to describe objects. Meaning, the class of an object specifies what subroutines and variables are contained in that object.

SUBROUTINE EXAMPLE OF `System.out.println`

This subroutine is used to display information to the user.

`System.out.println("Hello World");` transmits the message `"Hello World"`.

`System` is one of Java's standard classes.

`out` is one of the static member variables in this class.

The variable `System.out` refers to an object, and that object in turn contains a subroutine called `println`.

`"System.out.println"` is a compound identifier in Java that refers to the `"println"` method/subroutine within the `"out"` object of the `"System"` class.
