These days several CAD technologies such as Synopsys and Mentor Graphics are specifically created to increase the automation of VLSI design. When a task is completed using the appropriate tool each stage of the task design produces outcomes that are more productive than typical. However combining all of these tools into a single package offer has drawbacks. We can't really use every outlook without sacrificing the efficiency and usefulness of our output. The researchers decided to include AI approaches into VLSI design automation in order to get around these obstacles.
