Neuroscience Of Persona:

Neuroscience and Art Amy Ione,2024-08-27 This book is focused on how understanding ourselves as humans is incomplete without considering both biological and cultural aspects Using the neurocultural perspective the book explores how everything in the world is filtered back and forth through the brain and culture The thrust of the book therefore is to explore the power of art in creating a bridge between cultural and neuroscientific lines of inquiry Looking at both clinical and non clinical populations the text examines historical foundations distinguishes congenital developmental conditions from those that are acquired and emphasizes how the brain constructs our sensory experiences Several distinctive features separate this research from other publications First the book opens with a review of how the historical literature is still etched into the ideas we employ to explain elements across the interdisciplinary fields of art aesthetics our sensory experience psychology cognition and well being Second the research adopts a humanistic rather than a philosophical or social science perspective in demonstrating the value of coupling anatomy and physiology with the natural and social environment In this artists from all genres are incorporated Among them are Iris Murdoch Ludwig van Beethoven Leonardo da Vinci Cristoforo de Predis Rembrandt Federico Fellini Chuck Close and David Hockney Case studies demonstrate how neuroscientific research meshes with art individual and cultural variables in ways that range from health and well being to physiological decline and biological traumas These include a case study that examines how Oliver Sacks combined biology and biography in his writings It also explores art projects in several genres inspired by his studies Another case study is on the role of film as a useful clinical tool Here the book also demonstrates that cinematic devices used by filmmakers intersect with perceptual and cognitive neuroscience A defining feature of the analysis is the integration of research on brain injuries with humanistic responses in film literature and the visual arts This section outlines the lack of consensus regarding the causes and treatment of shell shock in World War I before introducing how research and art now work with PTSD TBI Finally the book examines therapeutic cases of professional and non professional artists concluding with a discussion of synesthesia and the senses

PMA Science of Psychology Jay Pacheco,2025-09-12 What if the wisdom of the ancients the breakthroughs of modern psychology and the discoveries of neuroscience were not separate threads but one mosaic of human resilience In PMA Science of Psychology Understanding Neurodiversity Jay Pacheco presents an updated edition of the 2024 publication guiding readers through the evolution of understanding the mind It spans from ancient myths to modern labs including insights from Marcus Aurelius and Viktor Frankl It also examines neurodiverse resilience and Positive Mental Attitude The work connects philosophy psychology and human potential Written in a style that is both scholarly and deeply human this work is more than a textbook it is a manual for life High school students university scholars parents of neurodiverse children therapists business leaders and everyday seekers will find in these pages not just knowledge but tools Stoic exercises PMA practices cognitive strategies and case studies that show how we endure adapt and flourish Here

Imaginative Minds Ilona Roth,2007-12-27 This volume brings the theories and methods of a range of disciplines to bear on the imaginative workings of the human mind The distinguished contributors demonstrate their own imaginative flair in a fascinating and varied collection of essays about this most elusive and special human capacity **Neuropsychadelia** Nicolas David Langlitz,2007 **What Have You Changed Your Mind About?** John Brockman,2009-01-06 150 high powered thinkers discuss their most telling missteps and reconsiderations **Interdisciplinary Journal for Germanic Linguistics and Semiotic Analysis** ,2004 **A History of Psychology in Autobiography** Gardner Lindzey,William McKinley Runyan,2007 This book is an attempt to examine the history of psychology through autobiographies of some of the science's early theorists The author of a recent history of psychology found that it was impossible to get important facts concerning the scientific development of certain individuals except from those individuals themselves Since a science separated from its history lacks direction and promises a future of uncertain importance it is a matter of consequence to those who wish to understand psychology for those individuals who have greatly influenced contemporary psychology to put into print as much of their personal histories as bears on their professional careers PsycINFO Database Record c 2006 APA all rights reserved **Neocortical Modularity and the Cell Minicolumn** Manuel F. Casanova,2005 Our everyday view of the world may not necessarily be the most comprehensive one In this regard neuropathologists should temper opinions based on a limited representation of reality Microscopy freezes in time a two dimensional representation of a minute histological process One must acquire knowledge of the physiology of the lesion before reaching a multidimensional diagnosis In the case of mental disorders the modular organisation of the cortex may offer some clues to underlying aetiology It is tissue rather than individual cells that provides for the phenomena of perceptual binding and gamma frequencies It is the continuous re entry of excitation into neuronal networks that provides for selective attention The basis for language and its semantic content resides in the conjoint activation of topographically diverse brain regions This book is designed to focus on the lowest hierarchical element within the modular organisation of the brain the cell minicolumn The minicolumn is a self contained

ecosystem of neurons and their connections that repeats itself throughout the extent of the neocortex. Although a few neuroanatomists at the turn of the century called attention to the vertical arrangement of the cortex, Vernon Mountcastle provided physiological proof in the 1950s for its existence and its role in perception. **Ingmar Bergman Revisited** Maaret Koskinen, 2008. This title is a collection of essays based on a major international symposium held in Stockholm in 2005 on Ingmar Bergman's legacy. Moving beyond simple auteurist readings of his films, these writings evaluate the theatrical and literary sides of Bergman's work to reconsider his achievements. **Wellbeing and Development in Peru** James Copestake, 2008-11-15. Development is something we all aspire to but also readily criticize for failing to live up to our hopes of sustained improvement in human wellbeing. This book presents findings of systematic research into the contested meanings of development and wellbeing from a country, Peru, which has recently experienced both rapid economic growth and deep social conflict. A mix of ethnographic and questionnaire data from seven poor urban and rural communities straddling the Andes is used to describe and analyze local and global interpretations of their inhabitants' pursuit of wellbeing.

Biopsychology John P. J. Pinel, 2009. Biopsychology clearly presents the fundamentals of the study of the biology of behavior and makes the topics personally and socially relevant to the student. The defining feature of Biopsychology is its unique combination of biopsychological science and personal reader oriented discourse. It is a textbook that is untextbooklike. Rather than introducing biopsychology in the usual textbook fashion, it interweaves the fundamentals of the field with clinical case studies, social issues, personal implications and humorous anecdotes. It tries to be a friendly mentor that speaks directly to the reader, enthusiastically relating recent advances in biopsychological science. **Personality** Lawrence A. Pervin, Oliver P. John, 2001. In *Personality Theory and Research* 10th Edition, the overall format of the text remains the same. The ordering of chapters integrating theory with research has been retained. The text aims to introduce the primary theoretical perspectives that guide contemporary research on personality and individual differences while reviewing a wide range of contemporary scientific findings on personality. Throughout the text, emphasis is placed on how theory and research inform one another. Rich case material shows how the theoretical conceptions yield insight into the lives of individual persons. In keeping with the long tradition of this text, the new edition treats each theoretical approach objectively and even handedly, encouraging readers to weigh the evidence and to formulate their own conclusions.
