**New Frontier In Evolutionary Algorithms: Theory And Applications** Hitoshi Iba,Nasimul Noman,2011-08-26 This book delivers theoretical and practical knowledge of Genetic Algorithms GA for the purpose of practical applications It provides a methodology for a GA based search strategy with the integration of several Artificial Life and Artificial Intelligence techniques such as memetic concepts swarm intelligence and foraging strategies The development of such tools contributes to better optimizing methodologies when addressing tasks from areas such as robotics financial forecasting and data mining in bioinformatics The emphasis of this book is on applicability to the real world Tasks from application areas optimization of the trading rule in foreign exchange FX and stock prices economic load dispatch in power system exit door placement for evacuation planning and gene regulatory network inference in bioinformatics are studied and the resultant empirical investigations demonstrate how successful the proposed approaches are when solving real world tasks of great importance

**GeoComputation, Second Edition** Robert J. Abrahart,Linda M. See,2014-06-23 A revision of Openshaw and Abrahart s seminal work GeoComputation Second Edition retains influences of its originators while also providing updated state of the art information on changes in the computational environment In keeping with the field s development this new edition takes a broader view and provides comprehensive coverage across the field of GeoComputation See What s New in the Second Edition Coverage of ubiquitous computing the GeoWeb reproducible research open access and agent based modelling Expanded chapter on Genetic Programming and a separate chapter developed on Evolutionary Algorithms Ten chapters updated by the same or new authors and eight new chapters added to reflect state of the art Each chapter is a stand alone entity that covers a particular topic You can simply dip in and out or read it from cover to cover The opening chapter by Stan Openshaw has been preserved with only a limited number of minor essential modifications having been enacted This is not just a matter of respect Openshaw s work is eloquent prophetic and his overall message remains largely unchanged In contrast to other books on this subject GeoComputation Second Edition supplies a state of the art review of all major areas in GeoComputation with chapters written especially for this book by invited specialists This approach helps develop and expand a computational culture one that can exploit the ever increasing richness of modern geographical and geospatial datasets It also supplies an instructional guide to be kept within easy reach for regular access and when need arises *Deep Neural*

*Evolution* Hitoshi Iba,Nasimul Noman,2020-05-20 This book delivers the state of the art in deep learning DL methods hybridized with evolutionary computation EC Over the last decade DL has dramatically reformed many domains computer vision speech recognition healthcare and automatic game playing to mention only a few All DL models using different architectures and algorithms utilize multiple processing layers for extracting a hierarchy of abstractions of data Their remarkable successes notwithstanding these powerful models are facing many challenges and this book presents the collaborative efforts by researchers in EC to solve some of the problems in DL EC comprises optimization techniques that are

useful when problems are complex or poorly understood or insufficient information about the problem domain is available. This family of algorithms has proven effective in solving problems with challenging characteristics such as non convexity, non linearity, noise and irregularity which dampen the performance of most classic optimization schemes. Furthermore, EC has been extensively and successfully applied in artificial neural network (ANN) research from parameter estimation to structure optimization. Consequently, EC researchers are enthusiastic about applying their arsenal for the design and optimization of deep neural networks (DNN). This book brings together the recent progress in DL research where the focus is particularly on three sub domains that integrate EC with DL: 1. EC for hyper parameter optimization in DNN, 2. EC for DNN architecture design and 3. Deep neuroevolution. The book also presents interesting applications of DL with EC in real world problems e.g. malware classification and object detection. Additionally, it covers recent applications of EC in DL e.g. generative adversarial networks (GAN) training and adversarial attacks. The book aims to prompt and facilitate the research in DL with EC both in theory and in practice.

*Real-life Applications with Membrane Computing* Gexiang Zhang, Mario J. Pérez-Jiménez, Marian Gheorghe, 2017-04-05. This book thoroughly investigates the underlying theoretical basis of membrane computing models and reveals their latest applications. In addition to date, there have been no illustrative case studies or complex real life applications that capitalize on the full potential of the sophisticated membrane systems computational apparatus gaps that this book remedies. By studying various complex applications including engineering optimization, power systems fault diagnosis, mobile robot controller design and complex biological systems involving data modeling and process interactions, the book also extends the capabilities of membrane systems models with features such as formal verification techniques, evolutionary approaches and fuzzy reasoning methods. As such, the book offers a comprehensive and up to date guide for all researchers, PhDs and undergraduate students in the fields of computer science, engineering and the bio sciences who are interested in the applications of natural computing models.
