**Accessibility and Acceptability in Technical Manuals** Inger Lassen, 2003 Accessibility and Acceptability in Technical Manuals is written for an audience with a general interest in readability studies linguistics and technical writing With the main emphasis on technical manuals the book is primarily targeted at those who have a special interest in the design and use of utility texts and how these texts are received and understood by a multifaceted audience Accessibility is not a new research area and many explanations have been offered over the past years as to why non experts often have difficulties in comprehending texts written by technological experts This book offers a new approach to accessibility studies by exploring not only style but also attitudes to style by asking text consumers which style they prefer for different parts of the manual A key role is played by the Systemic Functional Linguistics notion of grammatical metaphor a stylistic choice that is commonly used in technical literature Grammatical metaphor although apparently obstructing the comprehension process of some readers is a common element in the preferred style that separates the insiders from the outsiders An explanation of this rather surprising result is offered by resorting to Critical Discourse Analysis

Energies is open to submissions for a Special Issue on Renewable Energy Production from Energy Crops and Agricultural Residues Biomass represents an important source of renewable and sustainable energy production Its increasing consumption is mainly related to the increase in global energy demand and fossil fuel prices but also to a lower environmental impact compared to non renewable fuels These factors take RED II directives into consideration In the past forestry interventions were the main supply source of biomass but in recent decades two others sources have entered the international scene These are dedicated energy crops and agricultural residues which are important sources of biomass for biofuel and bioenergy Below we consider four main value chains Oil crops Oil production from non food oilseed crops such as

camelina Crambe safflower castor cuphea cardoon etc oil extraction and oil utilization for fuel production Lignocellulosic crops Biomass production from perennial grasses miscanthus giant reed switchgrass reed canary grass etc woody crops willow poplar Robinia eucalyptus etc and agricultural residues pruning maize cob maize stalks wheat chaff sugar cane straw etc considering two main transformation systems 1 Electricity heat production 2 Second generation ethanol production Carbohydrate crops cereals sweet sorghum sugar beets sugar cane etc for ethanol production Fermentable crops maize barley triticale Sudan grass sorghum etc and agricultural residues chaff maize stalks and cob fruit and vegetable waste etc for production of biogas and or biomethane
