Computer Networks Dr. K. Ramesh Kumar, *Fundamentals of Communications and Networking* Michael G. Solomon, David Kim, 2021-01-15 Today's networks are required to support an increasing array of real time communication methods. Video chat and live resources put demands on networks that were previously unimagined. While displaying technical depth, this new edition presents an evolutionary perspective of data networking from the early years to the local area networking boom to advanced IP data networks that support multimedia and real time applications. The Third Edition is loaded with real world examples, network designs and network scenarios that provide the reader with a wealth of data networking information and practical implementation tips. Key Features of the third Edition: Introduces network basics by describing how networks work. Discusses how networks support the increasing demands of advanced communications. Illustrates how to map the right technology to an organization's needs and business goals. Outlines how businesses use networks to solve business problems both technically and operationally.

IP Addressing and Subnetting INC IPV6 Syngress, 2000-01-28 Internetworking Protocol. IP addresses are the unique numeric identifiers required of every device connected to the Internet. They allow for the precise routing of data across very complex worldwide internetworks. The rules for their format and use are governed by the Internet Engineering Task Force (IETF) of the Internet Society (ISOC). In response to the exponential increase in demand for new IP addresses, the IETF has finalized its revision on IP addressing as IP Version 6, also known as IPv6. Next Generation. Key hardware vendors such as Cisco and major Internet Service Providers such as America Online have already announced plans to migrate to IP Version 6. IP address allocation within an organization requires a lot of long term planning. This timely publication addresses the administrator and engineer's need to know how IP 6 impacts their enterprise networks. Easy to read, light technical approach to cellular technology. Ideal for companies planning a phased migration from IP 4 to IP 6. Timely publication. The IETF standard was finalized in early 1999 and will begin to be implemented in late 1999/2000. The current IP Version 4 address set will be exhausted by 2003. The book focuses on planning and configuring networks and devices for IP 6. Specifically, it will cover how to: Increase the IP address size from 32 bits to 128 bits; Support more levels of addressing hierarchy; Support an increased number of addressable nodes; Support simpler auto configuration of addresses; Improve the scalability of multicast routing by adding a scope field to multicast addresses; Use a new anycast address to send a packet to any one of a group of nodes.
