Text Analysis Pipelines Henning Wachsmuth,2015-12-02 This monograph proposes a comprehensive and fully automatic approach to designing text analysis pipelines for arbitrary information needs that are optimal in terms of run time efficiency and that robustly mine relevant information from text of any kind Based on state of the art techniques from machine learning and other areas of artificial intelligence novel pipeline construction and execution algorithms are developed and implemented in prototypical software Formal analyses of the algorithms and extensive empirical experiments underline that the proposed approach represents an essential step towards the ad hoc use of text mining in web search and big data analytics Both web search and big data analytics aim to fulfill peoples needs for information in an adhoc manner The information sought for is often hidden in large amounts of natural language text Instead of simply returning links to potentially relevant texts leading search and analytics engines have started to directly mine relevant information from the texts To this end they execute text analysis pipelines that may consist of several complex information extraction and text classification stages Due to practical requirements of efficiency and robustness however the use of text mining has so far been limited to anticipated information needs that can be fulfilled with rather simple manually constructed pipelines

Computational Semiotics Jean-Guy Meunier,2021-08-12 Can semiotics and computers be compatible Can computation advance semiotics by enhancing the scientific basis of the theory of signs Coupling semiotics a philosophical and phenomenological tradition concerned with theories of signs with computation a formal discipline may seem controversial and paradoxical Computational Semiotics tackles these controversies head on and attempts to bridge this gap Showing how semiotics can build the same type of conceptual formal and computational models as other scientific projects this book opens up a rich domain of inquiry toward the formal understanding of semiotic artifacts and processes Examining how pairing semiotics with computation can bring more methodological rigor and logical consistency to the epistemic quest for the forms and functions of meaning without compromising the important interpretive dynamics of semiotics this book offers a new cutting edge model driven theory to the field
