Decision Support Systems in Critical Care M.Michael Shabot,Reed M. Gardner,2012-12-06 Modern critical care is characterized by the collection of large volumes of data and the making of urgent patient care decisions The two do not necessarily go together easily For many years the hope has been that ICU data management systems could play a meaningful role in ICU decision support These hopes now have a basis in fact and this book details the history methodology current status and future prospects for critical care decision support systems By focusing on real and operational systems the book demonstrates the importance of integrating data from diverse clinical data sources the keys to implementing clinically usable systems the pitfalls to avoid in implementation and the development of effective evaluation methods

Patient Data Management in Intensive Care Kurt Lenz,Philipp G.H. Metnitz,2012-12-06 Recent technological innovations influenced primarily by the development of more sophisticated faster and cheaper computer systems permitted also the evolution of more affordable systems for Patient Data Management so called PDM Systems The experience of the authors on one of the first PDMS installation sites in Europe shows that the purchase of such a system is not an easy task since accurate data are not available in a comparable format Therefore the first part of the book is devoted to a comparison of already installed commercially distributed bedside based PDMS with regard to their specifications functions and performance The methods included a questionnaire with detailed questions for the vendors to answer and a

table of functions comparing the most important functions which should be included in a PDMS With that list the different systems which were all in clinical use were checked for the availability and the way of use of these functions To evaluate variations in the systems performance an information retrieval test was designed and executed In the second part the different vendors whose systems were included in the study were to describe the systems from their viewpoints The third part contains papers describing the users experiences The fourth and last part shows how to use PDMS data for scientific and therapeutic purposes including two papers on clinical expert systems Thus this book provides valuable information for clinicians and hospital managers who have to decide on the purchase of a Patient Data Management System
