# Key Features

- MDS is a specialist support design product for the design of pipe, ducting, cable tray and multi-discipline supports.

- MDS operates entirely within the 3D, colour-shaded, multi-discipline environment of PDMS and Outfitting. All MDS users have access to all its features and facilities at all times, and all MDS data is created, controlled and maintained within the database.

- Support designers work by placing instances of standard support configurations into the 3D model, and connecting them to the required structure and the appropriate piping, ductwork or cable tray systems.

- Supports are created by selecting the parts to be supported, then the supporting structure and, finally, the type of standard support to be used. The application then automatically models the support to fit the selected location and supported items and creates all of the required components.

- Each support that is created in the 3D model contains sufficient components and detail to allow the entire support to be fully detailed and a complete Material Take Off to be generated. This includes any structural framework, together with ancillaries such as shoes, u-bolts, anchors, slip units, guides, stops, springs, reinforcing plates and trunnions.

- Support design takes place as an integral part of the overall detail design process and is fully coordinated across all engineering disciplines. Support designers can see all details of the structure and the piping, ducting and other systems.

Handbook of Batch Process Design P.N. Sharratt,2012-12-06 Batch processes are used to manufacture many fine organic chemicals and as such they can be considered to underpin much of the modern chemical industry Despite widespread use and a consequent huge contribution to wealth creation batch processes have attracted limited attention outside the user industries Batch chemicals processing uses a number of core techniques and technologies such as scheduling and sequence control agitation and batch filtration The combination of these technologies with often complex chemistry the multi purpose nature of much of this type of plant the distinctive safety and environmental issues and a fast moving commercial environment makes the development of a successful batch process a considerable challenge for the chemist or engineer The literature on the topics covered in this book is fragmented and often not easily accessible so this handbook has been written to address this problem and to bring together design and process analysismethods in the core areas of batch process design By combining the science and pragmatism required in the development of successful batch processes this new book provides answers to real problems in an accessible and concise way Written by an international team of authors drawn from industry consulting and academe this book is an essential part of the library of any chemist technologist or engineer working on the development of new or existing batch processes *Building Design and Construction Handbook, 6th Edition* Frederick S.
