Applications offers a modern elementary introduction with broad relevant applications. With traditional texts the early stages of the course are relatively easy as material is presented in a familiar concrete setting but students often hit a wall when abstract concepts are introduced. Certain concepts fundamental to the study of linear algebra such as linear independence, vector space and linear transformations require time to learn and students' understanding of them is vital. Lay, Lay and McDonald make these concepts more accessible by introducing them early in a familiar concrete \mathbb{R}^n setting, developing them gradually and returning to them throughout the text so that students can grasp them when they are discussed in the abstract. Throughout the 6th Edition, updates, exercises, and new applications take advantage of improved technology and offers more support for conceptual learning. Also available with MyLab Math.
