Build a Large Language Model (From Scratch) Sebastian Raschka, 2024-10-29

Learn how to create, train, and tweak large language models (LLMs) by building one from the ground up. In "Build a Large Language Model from Scratch," bestselling author Sebastian Raschka guides you step by step through creating your own LLM. Each stage is explained with clear text, diagrams, and examples. You'll go from the initial design and creation to pretraining on a general corpus and on to fine tuning for specific tasks. "Build a Large Language Model from Scratch" teaches you how to plan and code all the parts of an LLM: prepare a dataset suitable for LLM training, fine tune LLMs for text classification, and use your own data. Use human feedback to ensure your LLM follows instructions. Load pretrained weights into an LLM. "Build a Large Language Model from Scratch" takes you inside the AI black box to tinker with the internal systems that power generative AI. As you work through each key stage of LLM creation, you'll develop an in-depth understanding of how LLMs work, their limitations, and their customization methods. Your LLM can be developed on an ordinary laptop and used as your own personal assistant. About the technology: Physicist Richard P. Feynman reportedly said, "I don't understand anything I can't build." Based on this same powerful principle, bestselling author Sebastian Raschka guides you step by step as you build a GPT-style LLM that you can run on your laptop. This is an engaging book that covers each stage of the process from planning and coding to training and fine tuning. About the book: "Build a Large Language Model From Scratch" is a practical and eminently satisfying hands-on journey into the foundations of generative AI. Without relying on any existing LLM libraries, you'll code a base model, evolve it into a text classifier, and ultimately create a chatbot that can follow your conversational instructions. And you'll really understand it because you built it yourself. What's inside: Plan and code an LLM comparable to GPT-2. Load pretrained weights. Construct a complete training pipeline. Fine tune your LLM for text classification. Develop LLMs that follow human instructions. About the reader: Readers need intermediate Python skills and some knowledge of machine

learning The LLM you create will run on any modern laptop and can optionally utilize GPUs About the author Sebastian Raschka PhD is an LLM Research Engineer with over a decade of experience in artificial intelligence His work spans industry and academia including implementing LLM solutions as a senior engineer at Lightning AI and teaching as a statistics professor at the University of Wisconsin Madison Sebastian collaborates with Fortune 500 companies on AI solutions and serves on the Open Source Board at University of Wisconsin Madison He specializes in LLMs and the development of high performance AI systems with a deep focus on practical code driven implementations He is the author of the bestselling books Machine Learning with PyTorch and Scikit Learn and Machine Learning Q and AI The technical editor on this book was David Caswell Table of Contents 1 Understanding large language models 2 Working with text data 3 Coding attention mechanisms 4 Implementing a GPT model from scratch to generate text 5 Pretraining on unlabeled data 6 Fine tuning for classification 7 Fine tuning to follow instructions A Introduction to PyTorch B References and further reading C Exercise solutions D Adding bells and whistles to the training loop E Parameter efficient fine tuning with LoRA

GPU Parallel Program Development Using CUDA Tolga Soyata,2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated Because the core and memory structures of CPUs and GPUs are different the results differ in interesting ways The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs Part III of the book provides pointer for readers who want to expand their horizons It provides a brief introduction to popular CUDA libraries such as cuBLAS cuFFT NPP and Thrust the OpenCL programming language an overview of GPU programming using other programming languages and API libraries such as Python OpenCV OpenGL and Apple's Swift and Metal and the deep learning library cuDNN
