GEAR SELECTION

FIG. 29 Tractor is equipped to provide eight forward gear speeds and two reverse gear speeds.

Transmission shift lever 1 provides four forward gears and one reverse gear. Shuttle gear selections are controlled by range shift lever.

Range shift lever 2 provides two ranges in each transmission gear speed. This lever offers major change in ground speed.

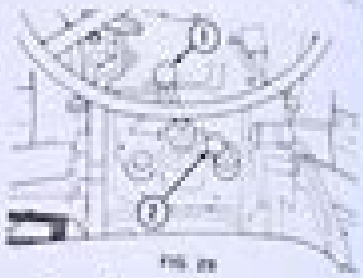

FIG. 29

FIG. 30 Shift pattern and arrangement of gear speeds in order from slow to fast are shown at right.

Depress clutch pedal and position shift levers in desired positions. Release parking brake lever and brake pedals, then slowly release clutch pedal.

Should another transmission gear and or range be desired, simply depress clutch and brake pedals (stopping the tractor), select the range and continue with Tractor operation.

IMPORTANT: *Depress clutch and stop tractor before shifting range gear or transmission gear levers.*

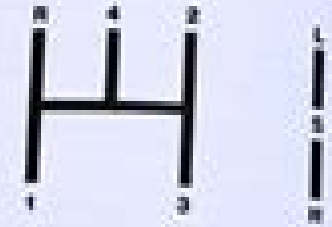

FIG. 30

Select the gear which will give the best fuel consumption without overloading the engine. Remember that ground conditions in the same field may vary, therefore select the gear in which the engine will operate satisfactorily and still provide some reserve power for tough areas.

IMPORTANT: *Never hold the tractor by "slipping" the clutch and avoid "riding" the clutch pedal. This which will cause overheating and eventual clutch failure.*

CAUTION: Never coast down slopes with the clutch disengaged (pedal depressed) or shifter lever in neutral.

BRAKE USAGE

FIG. 31 Brake pedals 1 and 2 may be used independently of one another to assist in turning of tractor when used in that manner operator should brake pedals and use as required to assist with steering.

When Tractor is transported on fairly level or highway use of speed brake pedals must be latched together with latch 3 so both brakes work simultaneously.

CAUTION: Do not use one wheel braking at high speed. Always latch brake pedals together when Tractor is being transported. Make sure brakes are adjusted evenly.

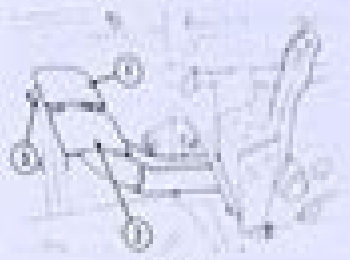

FIG. 31

DIFFERENTIAL LOCK

FIG. 32 Differential lock pedal 1 should only be depressed when required as effectiveness of the steering is greatly reduced. To engage differential lock, depress clutch pedal and arrow of rear wheel movements cease. Carefully depress lock pedal and slowly engage the clutch.

When further use of differential lock is not required, release differential lock pedal. Pedal should normally return to the "off" position. On occasion the differential lock pedal may remain engaged even after foot is removed from pedal due to a torque difference exerted by the rear wheels. In this case, depress clutch pedal and tap the pedal a few times while tractor is in motion to release the pedal.

IMPORTANT: *Do not engage differential lock with one wheel spinning. Serious mechanical damage will result.*
