Panoramic Vision Panoramic Vision:

Panoramic Vision Ryad Benosman, Sing B. Kang, 2013-06-29 Current cameras are poor imitations of the human eye and close descendants in their design of ideas and a technology that are more than a century old People in computer vision have traditionally used off the shelf cameras that were not meant for the uses they were intended for by these researchers off the shelf cameras are designed to capture images to be printed on paper or looked at on a television screen not for guiding robots or making 3D models of the environment or even surveilling a large area where very large field of views high geometric and photometric accuracies are necessary Quite a significant part of the efforts in computer vision has been targeted at overcoming algorithmically these problems The authors of this book convince us that it is possible to abandon the traditional route of using standard cameras and to follow the path of designing new cameras explicitly for solving the tasks at hand in computer vision applications This leads to different design concepts and allows to alleviate many of the difficulties encountered in the processing of the images taken with the traditional cameras
