Parallel One Part III Transform:

Fundamentals of Algebraic Graph Transformation Hartmut Ehrig, Karsten Ehrig, Ulrike Prange, Gabriele Taentzer, 2006-05-01 Graphs are widely used to represent structural information in the form of objects and connections between them. Graph transformation is the rule based manipulation of graphs an increasingly important concept in computer science and related fields. This is the first textbook treatment of the algebraic approach to graph transformation based on algebraic structures and category theory. Part I is an introduction to the classical case of graph and typed graph transformation. In Part II basic and advanced results are first shown for an abstract form of replacement systems so called adhesive high level replacement systems based on category theory and are then instantiated to several forms of graph and Petri net transformation systems. Part III develops typed attributed graph transformation a technique of key relevance in the modeling of visual languages and in model transformation. Part IV contains a practical case study on model transformation and a presentation of the AGG attributed graph grammar tool environment. Finally the appendix covers the basics of category theory signatures and algebras. The book addresses both research scientists and graduate students in computer science, mathematics and engineering.

Advances in Computing and Communications, Part III Ajith Abraham, Jaime Lloret, Mauri, John Buford, Junichi Suzuki, Sabu M. Thampi, 2011-07-08 This volume is the third part of a four volume set CCIS 190 CCIS 191 CCIS 192 CCIS 193 which constitutes the refereed proceedings of the First International Conference on Computing and Communications ACC 2011 held in Kochi India in July 2011. The 70 revised full papers presented in this volume were carefully reviewed and selected from a large number of submissions. The papers are organized in topical sections on security, trust and privacy, sensor networks, signal and image processing, soft computing techniques, system software, vehicular communications networks.

Reasoning About Program Transformations Jean-Francois Collard, 2007-06-14 The text contains a detailed and current presentation of the program analyses and transformations that extract the flow of data in computer memory systems. The emphasis is on a framework for the optimization of code for imperative programs and greater computer systems efficiency. In addition the author shows that correctness of program transformations is guaranteed by the conservation of data flow. Professionals and researchers in software engineering, computer engineering, program design, analysis and compiler design will benefit from its presentation of data flow methods and memory optimization of compilers.
