The book reviews the reciprocating piston petrol engine, the diesel engine, the combustion chambers and the different means of combustion processes. To counter friction, heat and wear, lubrication to the different moving parts is important. To counter excessive heat which can cause breakdown of lubricating oil films and materials such as gaskets, O rings, the engine is designed with a cooling system that uses air, water or engine coolants. Petrol engines use the carburation or injection type of fuel delivery, diesel engines use a high pressure system of fuel injection owing to the higher pressures existing in the diesel combustion chamber. The text explains the operation of the other parts of the vehicle including the ignition and starter system, emission controls, layshaft, gearboxes, drive lines and suspension systems. Heavy vehicles need highly efficient air brakes to stop them compared to the hydraulic brake systems used in smaller and lighter vehicles.
