*The Quintessential PIC® Microcontroller* Sid Katzen, 2013-03-09 Microprocessors and their microcontroller derivatives are a ubiquitous if rather invisible part of the infrastructure of our 21st century electronic 1 and communications society In 1998 it was reckoned that hidden in every home were about 100 microcontrollers and microprocessors in the sillging birthday card washing machine microwave oven television controller telephone personal computer and so on About 20 more lurked in the average family car For example monitoring in tire radio pressure sensors and displaying critical data through the car area network CAN Around 4 billion such devices are sold each year to implement the intelligence of these smart electronic devices ranging from smart egg timers through aircraft management systems The evolution of the microprocessor from the first Intel device introduced 30 years ago in 1971 has revolutionised the structure of society effectively creating the second smart industrial revolution coming to fruition at the beginning of the 21st century Although the microprocessor is better known in its guise of powering the ubiquitous PC in which raw computing power is the goal sales of such microprocessors as the Intel Pentium represent only around 2% of total volume The vast majority of sales are of low cost microcontrollers embedded into a dedicated function digital electronic device such as the smart card Here the emphasis is the integration of the core processor with memory and input output resources in the one chip This integrated computing system is known as a microcontroller
