### **Parental Stress and Early Child Development**

Kirby Deater-Deckard,Robin Panneton,2017-05-14 This book examines the complex impact of parenting stress and the effects of its transmission on young children's development and well-being e.g. emotion self-regulation, executive functioning, maltreatment, future parenting practices. It analyzes current findings on acute and chronic psychological and socioeconomic stressors affecting parents, including those associated with poverty and cultural disparities, pregnancy and motherhood, and caring for children with developmental disabilities. Contributors explore how parental stress affects cognitive, affective, behavioral, and neurological development in children while pinpointing core adaptation, resilience, and coping skills. Parents need to reduce abusive and other negative behaviors and promote optimal outcomes in their children. These nuanced, bidirectional perspectives on parent-child dynamics aim to inform clinical strategies and future research targeting parental stress and its cyclical impact on subsequent generations. Included in the coverage: Parental stress and child temperament; How social structure and culture shape parental strain and the well-being of parents and children; The stress of parenting children with developmental disabilities; Consequences and mechanisms of child maltreatment and the implications for parenting; How being mothered affects the development of mothering; Prenatal maternal stress and psychobiological development during childhood. *Parenting Stress and Early Child Development* is an essential resource for researchers, clinicians, and related professionals and graduate students in infancy and early childhood development, developmental psychology, pediatrics, family studies, and developmental neuroscience.
