

The background of the book cover is a high-angle aerial photograph of a river system. The river flows from the bottom left towards the top right, with numerous tributaries creating a complex, braided pattern. The surrounding land is a vibrant green, suggesting a lush, possibly tropical or subtropical, environment. In the distance, a small bridge spans one of the larger branches of the river. The overall scene is one of natural beauty and geological complexity.

Book Moons Very Short Introduction Introductions:

Moons David A. Rothery, 2015-11-26 Proving to be both varied and fascinating moons are far more common than planets in our Solar System Our own Moon has had a profound influence on Earth not only through tidal effects but even on the behaviour of some marine animals Many remarkable things have been discovered about the moons of the giant outer planets from Voyager Galileo Cassini and other spacecraft Scientists have glimpsed volcanic activity on Io found oceans of water on Titan and captured photos of icy geysers bursting from Enceladus It looks likely that microbial life beyond the Earth may be discovered on a moon rather than a planet In this Very Short Introduction David Rothery introduces the reader to the moons of our Solar System beginning with the early discoveries of Galileo and others describing their variety of mostly mythological names and the early use of Jupiter's moons to establish position at sea and to estimate the speed of light Rothery discusses the structure formation and influence of our Moon and those of the other planets and ends with the recent discovery of moons orbiting asteroids whilst looking forward to the possibility of finding moons of exoplanets in planetary systems far beyond our own **ABOUT THE SERIES** The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Planets: A Very Short Introduction David A. Rothery, 2010-11-25 This Very Short Introduction discusses the nature of planets and gas giants and their rings and moons It also looks beyond Pluto in the Kuiper Belt at the knowledge we have about planets around other stars With many striking photos to illustrate the details it demonstrates the unique world of every planet

Intro to Meteorology & Astronomy Parent Lesson Planner, 2014-09-09 Introduction to Meteorology and Astronomy Course Description This is the suggested course sequence that allows one core area of science to be studied per semester You can change the sequence of the semesters per the needs or interests of your student materials for each semester are independent of one another to allow flexibility Semester 1 Meteorology The Earth was created to be the dwelling place of man It is a complex world and its weather patterns affect our lives every day Whether you live near the equator a polar region or somewhere in between knowledge of the weather is important The Weather Book will teach you why our exact distance from the sun allows life on earth how the weather on the other side of the earth affects you how clouds form and how to identify the different types what the difference is between a cold and warm front why you can often see lightning long before you can hear thunder how to build your own weather station how to survive in dangerous weather what the greenhouse effect and the ozone hole are what Noah's flood and the Ice Age have in common how weatherpersons forecast hurricanes and tornadoes how to read a weather map and what our responsibility is to the environment Learning about the weather is fun It will change the way you look at the clouds in the sky Now you'll have more of an understanding about what is going on miles above your head And when you hear a weather report on television you will understand so much

more about the world around you Semester 2 Astronomy One thing we have in common with the ancients is that all of the human race has gazed at the night sky and the bright morning and wondered What s out there Our universe is so vast and awe inspiring that to learn about it is to learn about ourselves The Astronomy Book will teach you what long ago astronomers thought about other worlds solar system facts how constellations relate to astrology the history of space exploration black holes do they exist the origin and age of the moon why Mars doesn t support life the composition of stars supernova remnants and the myth of star birth asteroid legends and the extinction of the dinosaurs are there planets outside our solar system and could they be home to intelligent life what are UFOs and the age of comets and meteor showers Learning about the universe is huge fun In the almost infinite expanse above us we can examine planets galaxies and phenomena so beautiful and complex that we never outgrow a childlike wonder We see our own reflection in the moon the stars and in comet trails
