Online Necessary Beings Ontology Modality Relations:

Ontology, Modality, and Mind Alexander Carruth, Sophie Gibb, John Heil, 2018-10-04 This book explores a range of traditional and contemporary metaphysical themes that figure in the writings of E J Lowe whose powerful and influential work was still developing at the time of his death in 2015 During his forty year career he established himself as one of the world's leading philosophers publishing eleven single authored books and well over two hundred essays His scholarship was strikingly broad ranging from early modern philosophy to the interpretation of quantum mechanics His most important and sustained contributions were to philosophy of mind philosophical logic and above all metaphysics E J Lowe was committed to a systematic realist and scientifically informed neo Aristotelean approach to philosophy This volume presents a set of new essays by philosophers who share this commitment addressing interrelated themes of his work In particular these papers focus upon three closely connected topics central not only to Lowe's work but to contemporary metaphysics and philosophy of mind in general ontology and categories of being essence and modality and the metaphysics of mental causation

Artificial Dispositions William A. artificial dispositions what they are the roles they play in artificial systems and how they impact our understanding of the nature of reality the structure of minds and the ethics of emerging technologies It is divided into four parts covering the following interconnected themes i Artificial and Natural Dispositions ii Artificial Systems and Their Dispositions iii Agency Mind and Artificial Dispositions and iv Artificial Moral Dispositions This is a groundbreaking and thought provoking resource for any student or scholar of philosophy of science contemporary metaphysics applied ethics philosophy of mind and philosophy of technology

A Case for Necessitarianism Amy Karofsky, 2021-12-29 This book is the first detailed and focused defense of necessitarianism The author's original account of necessitarianism encourages a reexamination of commonly held metaphysical positions as well as important issues in other related areas of philosophy Necessitarianism is the view that absolutely nothing about the world could have been otherwise in any way whatsoever Most philosophers believe that necessitarianism is just plain false and presume that some things could have been otherwise than what they are In this book the author argues that necessitarianism is true and the view that some things in the world are contingent what the author terms contingentarianism is false The author assesses various theories of contingency including the possible worlds theory combinatorialism and dispositionalism and argues that no theory can successfully explain why an entity is such as it is rather than not She then lays out a case for necessitarianism and provides responses to various objections The book concludes with an explanation of the ways in which necessitarianism is relevant to issues in ethics philosophy of mind and social philosophy A Case for Necessitarianism will be of interest to scholars and advanced students working in metaphysics logic and philosophy of science

Necessary Beings Bob Hale, 2015 Necessary Beings is concerned with two central areas of metaphysics modality the theory of necessity possibility and other related notions and ontology the general study of what kinds of entities there are Bob Hale's overarching purpose is to develop and defend two quite general theses about what is required for the existence of entities of various kinds that questions about what kinds of things there are cannot be properly understood or adequately answered without recourse to considerations about possibility and necessity and that conversely questions about the nature and basis of necessity and possibility cannot be satisfactorily tackled without drawing on what might be called the methodology of ontology Taken together these two theses claim that ontology and modality are mutually dependent upon one another neither more fundamental than the other Hale defends a broadly Fregean approach to metaphysics according to which ontological distinctions among different kinds of things objects properties and relations are to be drawn on the basis of prior distinctions between different logical types of expression The claim that facts about what kinds of things exist depend upon facts about what is possible makes little sense unless one accepts that at least some modal facts are fundamental and not reducible to facts of some other non modal sort He argues that facts about what is absolutely necessary or possible have this character and that they have their source or basis not in meanings or concepts nor in facts about alternative worlds but in the natures or essences of things
