- **Response behavior selectable in three (3) sensitivity settings**
- **Operates according to the principle of light-attenuation-by-smoke**
- **Integrated multi-coincidence circuit suppresses electric and optical noise signals**
- **UL Listed, UL Listed**

Product Overview

Linear Beam Detectors (Model PBA-1191) from Siemens Industry – Fire Safety provide reliable monitoring over long distances that range from 17 to 280 feet (5M – 100M for Canada.) Model PBA-1191 works in conjunction with various types of reflectors, according to each reflector's installation requirements.

Application

Model PBA-1191 was developed to cover a wide range of applications. Hence, Model PBA-1191 can be used to supplement or replace point-type smoke detectors, when required. Some examples of the aforementioned applications include:

- large or high ceiling rooms (atriums and warehouses)
- rooms with complex ceiling structures (beam construction)

- structures subject to frequent tremors
- buildings whose walls flex as a result of temperature change or wind conditions
- aircraft hangars
- churches
- computer rooms
- museums
- malls
- corridors
- historical buildings

Model PBA-1191 should not be used in applications where the beam is interrupted on a repeatable basis.

Operation

Model PBA-1191 consists of a transmitter (IRLED) that emits an invisible infrared (IR) pulse through the transmitter lens. The IR pulse traverses the protected area to reach the reflector located opposite the detector and is then reflected back to the detector.

Linear Beam Smoke Detector **6171**
