Examining Internet and Technology around the World Laura M. Steckman,2020-12-02 This book offers comparative insights into the challenges and opportunities surrounding emerging technology and the internet as it is used and perceived throughout the world providing students with cross cultural and cross national perspectives. This volume examines issues pertaining to the internet and technology including access and censorship, alternative energy technologies, artificial intelligence, autonomous robots, cyberbullying, cybercrime, e learning, GMOs, online privacy and virtual and augmented reality. For each topic the volume features eight country level perspectives that span the world to allow for comparisons of different nations specific approaches to the technology or issue. This encyclopedia takes a new direction in understanding the importance and impact of emerging technologies on the world showing that even when experiencing similar technologically related challenges or advances these technologies do not form one size fits all solutions for every nation and population. Even when nations develop similar technologies human dimensions from policy to social norms to culture influence people and society across the world differently.

Relationality Arturo Escobar, Michal Osterweil, Kriti Sharma, 2024-05-16 This important new book argues that at the root of the contemporary crisis of climate, energy, food, inequality and meaning is a certain core presupposition that structures the ways in which we live, think, act and design: the assumption of dualism or the fundamental separateness of things. The authors contend that the key to constructing livable worlds lies in the cultivation of ways of knowing and acting based on a profound awareness of the fundamental interdependence of everything that exists, what they refer to as relationality. This shift in paradigm is necessary for healing our bodies, ecosystems, cities and the planet at large. The book follows two interwoven threads of argumentation: on the one hand it explains and exemplifies the modes of operation and the

dire consequences of non relational living on the other it elucidates the nature of relationality and explores how it is embodied in transformative practices in multiple spheres of life The authors provide an instructive account of the philosophical scientific social and political sources of relational theory and action with the aim of illuminating the transition from living within seemingly ineluctable toxic loops of unrelational living based on ontological dualism to living within relational weaves which we might co create with multiple human and nonhuman others [Magazines for Libraries](#) William A.
