### **Book Bonded Repairs Composite Airframe Structures:**

Bonded Joints and Repairs to Composite Airframe Structures Chun Hui Wang, Cong N. Duong, 2015-10-10 Bonded Joints and Repairs to Composite Airframe Structures is a single source reference on the state of the art in this rapidly growing area. It provides a thorough analysis of both internal and external joints and repairs as well as discussions on damage tolerance, non-destructive inspection, self-healing repairs, and other essential information not only on the joints and repairs themselves but critically on how they differ from bonds and repairs to metallic aircraft. Authors Wang and Duong bring a valuable combination of academic research and industry expertise to the book, drawing on their cutting-edge composite technology experience, including analytic and computational leadership of damage and repair planning for the Boeing 787. Intended for graduate students, engineers, and scientists working on the subject in aerospace industry, government agencies, research labs, and academia, the book is an important addition to the limited literature in the field. Offers rare coverage of composite joints and repairs to composite structures, focusing on the state of the art in analysis. Combines the academic, government, and industry expertise of the authors, providing research findings in the context of current and future applications. Covers internal and external joints and repairs as well as damage tolerance, non-destructive inspection, and self-healing repairs. Ideal for graduate students, engineers, and scientists working in the aerospace industry, government agencies, research labs, and academia.

Composite Repair Cong N. Duong, Chun Hui Wang, 2010-07-07 Bonded composite repairs are efficient and cost-effective means of repairing cracks and corrosion, grind-out cavity in metallic structures, and composite structures sustained impact and ballistic damages, especially in aircraft structures. This book grew out of the recent research conducted at the Boeing Company and the Defence Science and Technology Organisation (DSTO) Australia over the past ten years. Consequently, it is predominately a compilation of the work by the authors and their colleagues at these two organizations on the design and analysis of composite repairs. Composite Repair is entirely devoted to the design and analysis of bonded repairs, focusing on the mathematical techniques and analysis approaches that are critical to the successful implementation of bonded repairs. The topics addressed are presented in a sufficiently self-explanatory manner and serve as a state-of-the-art reference guide to engineers, scientists, researchers, and practitioners interested in the underpinning design methodology and the modelling of composite repairs. The only book devoted entirely to the design and analysis of bonded repairs, focusing on mathematical techniques and analytical methodologies that are critical to the successful implementation of bonded repair. A companion reference book to the United States Air Force (USAF) bonded repair guidelines, Guidelines for Composite Repair of Metallic Structures (CRMS AFRL WP TR 1998 4113) and the Royal Australian Air Force (RAAF) Design Standard DEF AUST 995. Covering a variety of topics and effects: repairs of fatigue and sonic fatigue cracks and corrosion, grind-out cavity, and effects of secondary bending, octagon-shaped patches, thermal residual stresses, patches in proximity, patch tapering edge, etc.

**Bonded Repair of Aircraft Structures** A. Baker, Jones, 1988-05-31 The conventional approach to through-life support

for aircraft structures can be divided into the following phases i detection of defects ii diagnosis of their nature and significance iii forecasting future behaviour prognosis and iv pre scription and implementation of remedial measures including repairs Considerable scientific effort has been devoted to developing the science and technology base for the first three phases Of particular note is the development of fracture mechanics as a major analytical tool for metals for predicting residual strength in the presence of cracks damage tolerance and rate of crack propagation under service loading Intensive effort is currently being devoted to developing similar approaches for fibre composite structures particularly to assess damage tolerance and durability in the presence of delamination damage Until recently there has been no major attempt to develop a science and tech nology base for the last phase particularly with respect to the development of repairs Approaches are required which will allow assessment of the type and magnitude of defects amenable to repair and the influence of the repair on the stress intensity factor or some related parameter Approaches are also required for the development and design of optimum repairs and for assessment of their durability
