### **Book Rethinking Technical Services Frameworks 21st Century:**

Rethinking Technical Services Bradford Lee Eden, 2015-11-13 Volume 6 of the series Creating the 21st Century Academic Library is focused on academic library technical services operations and ways that they have been transformed and reimagined for working in today's higher education environment. The literature on the place and role of technical services librarians, technical services staff, and technical services operations has expanded and grown in the last few years as decreased budgets, a focus on essential public services, and information discovery on the Internet has driven the profession to re-examine the need or importance of this back end or hidden library department. Topics discussed in this book include frameworks for the networked environment, roles for metadata librarians in the areas of research data and digital initiatives, the renewed focus on the discovery of information and its place in academic libraries, the new normal in academic library technical services operations, emerging roles and opportunities for technical services managers, the re-training and re-skilling of technical services staff, hidden collections and needed or unexplored areas of expertise with technical services librarians and staff, the faceted application of subject headings FAST and obsolete or outdated subject terminology within Library of Congress Subject Headings, and a conversation about downsizing and moving forward within a law library technical services unit.

*Technology Integration and High Possibility Classrooms* Jane Hunter, 2015-03-02 *Technology Integration and High Possibility Classrooms* provides a fresh vision for education in schools based on new research from in-depth studies of technology integration in exemplary teachers' classrooms. This timely book meets the demand for more examples of effective technology integration by providing a new conceptual understanding that builds on the popular and highly influential theoretical framework of technological pedagogical and content knowledge (TPACK). *Technology Integration and High Possibility Classrooms* details four rich case studies set in different contexts with students ranging from age 6 to 16. Each case study articulates in very practical terms what characterizes exemplary teachers' knowledge of technology integration and how that is applied in classrooms. This highly accessible book clearly demonstrates how theory informs practice and provides new possibilities for learning in twenty-first century schools.
