Wilkins, Ronald T. Coslick, 1998-09-01 Teachers have the responsibility of helping all of their students construct the disposition and knowledge needed to live successfully in a complex and rapidly changing world To meet the challenges of the 21st century students will especially need mathematical power a positive disposition toward mathematics curiosity and self confidence facility with the processes of mathematical inquiry problem solving reasoning and communicating and well connected mathematical knowledge an understanding of mathematical concepts procedures and formulas This guide seeks to help teachers achieve the capability to foster children's mathematical power the ability to excite them about mathematics help them see that it makes sense and enable them to harness its might for solving everyday and extraordinary problems The investigative approach attempts to foster mathematical power by making mathematics instruction process based understandable or relevant to the everyday life of students Past efforts to reform mathematics instruction have focused on only one or two of these aims whereas the investigative approach accomplishes all three By teaching content in a purposeful context an inquiry based fashion and a meaningful manner this approach promotes children's mathematical learning in an interesting thought provoking and comprehensible way This teaching guide is designed to help teachers appreciate the need for the investigative approach and to provide practical advice on how to make this approach happen in the classroom It not only dispenses information but also serves as a catalyst for exploring conjecturing about discussing and contemplating the teaching and learning of mathematics **Neuronal Stochastic Variability: Influences on Spiking Dynamics and**

Network Activity Mark D. McDonnell, Joshua H. Goldwyn, Benjamin Lindner, 2016-07-18 Stochastic fluctuations are intrinsic to and unavoidable at every stage of neural dynamics For example ion channels undergo random conformational changes neurotransmitter release at synapses is discrete and probabilistic and neural networks are embedded in spontaneous background activity The mathematical and computational tool sets contributing to our understanding of stochastic neural dynamics have expanded rapidly in recent years New theories have emerged detailing the dynamics and computational power of the balanced state in recurrent networks At the cellular level novel stochastic extensions to the classical Hodgkin

Huxley model have enlarged our understanding of neuronal dynamics and action potential initiation Analytical methods have been developed that allow for the calculation of the firing statistics of simplified phenomenological integrate and fire models taking into account adaptation currents or temporal correlations of the noise This Research Topic is focused on identified physiological internal noise sources and mechanisms By internal we mean variability that is generated by intrinsic biophysical processes This includes noise at a range of scales from ion channels to synapses to neurons to networks The contributions in this Research Topic introduce innovative mathematical analysis and or computational methods that relate to empirical measures of neural activity and illuminate the functional role of intrinsic noise in the brain
