**Analytic Solutions for Flows Through Cascades** Peter Jonathan Baddoo, 2020-08-31 This thesis is concerned with flows through cascades i.e. periodic arrays of obstacles. Such geometries are relevant to a range of physical scenarios chiefly the aerodynamics and aeroacoustics of turbomachinery flows. Despite the fact that turbomachinery is of paramount importance to a number of industries many of the underlying mechanisms in cascade flows remain opaque. In order to clarify the function of different physical parameters the author considers six separate problems. For example he explores the significance of realistic blade geometries in predicting turbomachinery performance and the possibility that porous blades can achieve noise reductions. In order to solve these challenging problems the author deploys and indeed develops techniques from across the spectrum of complex analysis the Wiener Hopf method Riemann Hilbert problems and the Schottky Klein prime function all feature prominently. These sophisticated tools are then used to elucidate the underlying mathematical and physical structures present in cascade flows. The ensuing solutions greatly extend previous works and offer new avenues for future research. The results are not of simply academic value but are also useful for aircraft designers seeking to balance aeroacoustic and aerodynamic effects.

Zech, 2013-11-11 *Astronomy and Astrophysics Abstracts* which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world. It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970. *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics. Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume 17 contains literature published in 1976 and received before August 15 1976. Some older literature which was received late and which is not recorded in earlier volumes is also included. We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization C S I R O Sydney for providing titles and abstracts of papers on radio astronomy. We want to acknowledge valuable contributions to this volume by Zentralstelle für Atomkernenergie Dokumentation Leopoldshafen which supported our abstracting service by sending us retrospective literature searches.
