Nerc Study Guide For System Operators:

Power System Dynamic Modelling and Analysis in Evolving Networks Babak Badrzadeh,Zia Emin,2024-07-31 This Green Book is an essential resource for power system engineers seeking comprehensive information on contemporary power system dynamic modelling and analysis With today s rapid adoption of inverter based resources and the resulting changes in power system dynamics this book compares conventional power systems with evolving power systems characterized by high shares of grid connected and distributed inverter based resources It covers dynamic phenomena analysis methods simulation tools and enablers required for secure and reliable system planning and operation Starting with an overview of power system studies and associated analysis tools the book provides modelling requirements for various power system components including existing and emerging technologies It includes practical examples from real world power systems worldwide that act as step by step study guides for practising engineers and provides knowledge to apply in their day to day tasks Additionally the book emphasizes the importance of power system model acceptance testing and validation providing practical examples of various testing methods Written with practising power system engineers in mind this book minimizes the use of advanced mathematics However relevant sources for those interested in learning more about mathematical concepts are provided Overall this book is an invaluable resource for power system engineers navigating contemporary power systems Readers who would like to comment on any of the published books or identify errors to the editorial team please contact cigregreenbooks.springer.com

Deep Learning for Power System Applications Fangxing Li,Yan Du,2023-11-10 This book provides readers with an in depth review of deep learning based techniques and discusses how they can benefit power system applications Representative case studies of deep learning techniques in power systems are investigated and discussed including convolutional neural networks CNN for power system security screening and cascading failure assessment deep neural networks DNN for demand response management and deep reinforcement learning deep RL for heating ventilation and air conditioning HVAC control Deep Learning for Power System Applications Case Studies Linking Artificial Intelligence and Power Systems is an ideal resource for professors students and industrial and government researchers in power systems as well as practicing engineers and AI researchers Provides a history of AI in power grid operation and planning Introduces deep learning algorithms and applications in power systems Includes several representative case studies
