Nerve Mobilization Of The Upper Extremity A Review Of Current Research:

Nerve Mobilization of the Upper Extremity Caroline Joy Co Pt, Cht Csfa Caroline Joy Co Pt Dpt, 2010-01 The nervous system is a complex arrangement of the nerve cells and tissues It regulates the body responses to external and internal stimuli The peripheral nervous system is responsible for the transfer of information between the motor and sensory neurons and their effectors in both directions Injuries to the peripheral nervous system often result in significant deterioration of the regular activities Many of the peripheral nerve injuries in the upper extremity are often a result of traction injury to the brachial plexus Such injuries are commonly associated with altered shoulder postures and functional imbalance in the arm forearm and hand due to pain in the related nerves and muscles Brachial plexus neuropathy is one of the commonly noted upper extremity pain syndromes The involvement of the peripheral neuropathies and cervical spine pathologies can complicate the diagnosis of brachial plexus neuropathy Most of the nerve injuries are believed to arise due to influence of the physical factors that alter the mechanical abilities of the nerve fibers Nerve mobilization has been projected as an efficient therapy to treat the pathologies of the nervous system It is essential to know about the basics of the nervous system the neuropathology the transmission of pain and movement dysfunction before initiating nerve mobilization procedure The movements of the nerves or nerve fibers can result in changes in the internal nerve physiology by altering the neural tension Neural mobilization aims at relieving such changes in the nerve physiology to relieve the symptoms of pain and restriction of mobility It is also vital to have a clear idea about the principles guidelines precautions and contraindications of nerve mobilization for better utilization of this procedure

A Review of Current Research Caroline Joy Co, Caroline Joy y Co Pt, 2010 This book reviews the most current research on therapeutic modalities myofascial release of the upper extremity nerve mobilization proprioceptive training and stroke rehabilitation Why do we publish continuing education modules Because even though there are a lot out there a lot claiming that they provide evidence based studies they don't Most of the time the research used are more than 20 years old This is why we founded Rehabsurge Inc We choose a topic of interest for the rehabilitation professional We review all the journals that pertain to that topic We subscribe to major online libraries which contain peer reviewed journals Then we read each journal and summarize them into easy to read books The cost of subscription to these journals are astronomical Also the time to read and review each journal takes so much time This is our goal to provide the latest research to clinicians and to save clinicians time
