Regarding online transaction processing (OLTP) workloads, the IBM z Systems™ platform with IBM DB2 data sharing, Workload Manager (WLM), geplex and other high-end features is the widely acknowledged leader. Most customers now integrate business analytics with OLTP by running, for example, scoring functions from transactional context for real-time analytics or by applying machine learning algorithms on enterprise data that is kept on the mainframe. As a result, IBM adds investment so clients can keep the complete lifecycle for data analysis, modeling and scoring on z Systems control in a cost-efficient way, keeping the qualities of services in availability, security and reliability that z Systems solutions offer. Because of the changed architecture and tighter integration, IBM has shown in a customer proof of concept that a particular client was able to achieve an orders of magnitude improvement in performance, allowing that client's data scientist to investigate the data in a more interactive process.
