

Practical 1: Case Study of Network devices in Computer Network.

Network devices, or networking hardware, are physical devices that are required for communication and interaction between hardware on a computer network.

Types of network devices

Here is the common network device list:

- Hub
- Switch
- Router
- Bridge
- Gateway
- Modem
- Repeater
- Access Point

Hub

- Hubs connect multiple computer networking devices together.
- A hub also acts as a repeater in that it amplifies signals that deteriorate after traveling long distances over connecting cables.
- A hub is the simplest in the family of network connecting devices because it connects LAN components with identical protocols.
- A hub can be used with both digital and analog data, provided its settings have been configured to prepare for the formatting of the incoming data.
- For example, if the incoming data is in digital format, the hub must pass it on as packets; however, if the incoming data is analog, then the hub passes it on in signal form.
- Hubs do not perform packet filtering or addressing functions; they just send data packets to all connected devices.
- Hubs operate at the Physical layer of the Open Systems Interconnection (OSI) model. There are two types of hubs: simple and multiple port.
