Network Performance Analysis Using The J Programming Language:

Network Performance Analysis Alan Holt, 2007-10-06 Network Calculus is a mathematical theory concerned with deriving performance bound networks and this book aims to show that it can provide useful methods for designing and engineering networks. Examples are implemented in J making the subject more accessible to those that although have a mathematical background are not pure mathematicians. Basic and advanced concepts of J are introduced throughout when required to illustrate different issues. Topics covering Network Calculus include wide sense increasing functions, min-plus algebra, convolution and arrival, departure and services curves. Comprehensive examples in the application of Network Calculus are given. Models for simulating network traffic and network systems are discussed and congestion control is explored. This book brings Network Calculus closer to the network professional and will equally appeal to postgraduates studying network performance by providing valuable analytical tools and using J as a means of providing a practical treatment of the subject.

Performance Analysis of Computer Networks Matthew N.O. Sadiku, Sarhan M. Musa, 2013-10-02 This book covers performance analysis of computer networks and begins by providing the necessary background in probability theory, random variables and stochastic processes. Queuing theory and simulation are introduced as the major tools analysts have access to. It presents performance analysis on local metropolitan and wide area networks as well as on wireless networks. It concludes with a brief introduction to self-similarity. Designed for a one semester course for senior year undergraduates and graduate engineering students, it may also serve as a fingertip reference for engineers, developing communication networks managers involved in systems planning and researchers and instructors of computer communication networks.

Artificial Neural Networks - ICANN 2010 Konstantinos Diamantaras, Wlodek Duch, Lazaros S. Iliadis, 2010-09-13 This volume is part of the three volume proceedings of the 20th International Conference on Artificial Neural Networks (ICANN 2010) that was held in Thessaloniki, Greece during September 15-18, 2010. ICANN is an annual meeting sponsored by the European Neural Network Society (ENNS) in cooperation with the International Neural Network Society (INNS) and the Japanese Neural Network Society (JNNS). This series of conferences has been held annually since 1991 in Europe, covering the field of neurocomputing, learning systems and other related areas. As in the past 19 events, ICANN 2010 provided a distinguished, lively and interdisciplinary discussion forum for researchers and scientists from around the globe. It offered a good chance to discuss the latest advances of research and also all the developments and applications in the area of Artificial Neural Networks (ANNs). ANNs provide an information processing structure inspired by biological nervous systems and they consist of a large number of highly interconnected processing elements (neurons). Each neuron is a simple processor with a limited computing capacity, typically restricted to a rule for combining input signals utilizing an activation function in order to calculate the output. Output signals may be sent to other units along connections known as weights that excite or inhibit the signal being communicated. ANNs have the ability to learn by example a large volume of cases through several iterations.
