**Neural-Symbolic Cognitive Reasoning** Artur S. D'Avila Garcez, Luís C. Lamb, Dov M. Gabbay, 2008-10-15 Humans are often extraordinary at performing practical reasoning There are cases where the human computer slow as it is is faster than any artificial intelligence system Are we faster because of the way we perceive knowledge as opposed to the way we represent it The authors address this question by presenting neural network models that integrate the two most fundamental phenomena of cognition our ability to learn from experience and our ability to reason from what has been learned This book is the first to offer a self contained presentation of neural network models for a number of computer science logics including modal temporal and epistemic logics By using a graphical presentation it explains neural networks through a sound neural symbolic integration methodology and it focuses on the benefits of integrating effective robust learning with expressive reasoning capabilities The book will be invaluable reading for academic researchers graduate students and senior undergraduates in computer science artificial intelligence machine learning cognitive science and engineering It will also be of interest to computational logicians and professional specialists on applications of cognitive hybrid and artificial intelligence systems     [Open Semantic Technologies for Intelligent System](#) Vladimir Golenkov, Victor Krasnoprosin, Vladimir Golovko, Elias Azarov, 2020-10-24 This book constitutes the refereed proceedings of the 10th International Conference on Open Semantic Technologies for Intelligent System OSTIS 2020 held in Minsk Belarus in February 2020 The 14 revised full papers and 2 short papers were carefully reviewed and selected from 62 submissions The papers mainly focus on standardization of intelligent systems and cover wide research fields including knowledge representation and reasoning semantic networks natural language processing temporal reasoning probabilistic reasoning multi agent systems intelligent agents     [Open Semantic Technologies for Intelligent Systems](#) Vladimir Golenkov, Viktor Krasnoprosin, Vladimir Golovko, Daniil Shunkevich, 2022-09-27 This book constitutes the refereed proceedings of the 11th International Conference on Open Semantic Technologies for Intelligent Systems OSTIS 2021 held in Minsk Belarus during September 16 18 2021 The 20 full papers included in this book were carefully reviewed and selected from 46 submissions The papers are focused on the development of flexible and compatible technologies that provide fast and high quality construction of intelligent systems for various purposes     *Artificial Neural Networks and Machine Learning -- ICANN 2012* Alessandro Villa, Wlodzislaw Duch, Peter Erdi, Francesco Masulli, Günther Palm, 2012-09-19 The two volume set LNCS 7552 7553 constitutes the proceedings of the 22nd International Conference on Artificial Neural Networks ICANN 2012 held in Lausanne Switzerland in September 2012 The 162 papers included in the proceedings were carefully reviewed and selected from 247 submissions They are organized in topical sections named theoretical neural computation information and optimization from neurons to neuromorphism spiking dynamics from single neurons to networks complex firing patterns movement and motion from sensation to perception object and face recognition reinforcement learning bayesian and echo

**Encyclopedia of the Sciences of Learning** Norbert M. Seel, 2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i.e. how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology Beyond folk psychology and its naive theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely The Encyclopedia of the Sciences of Learning provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning More specifically the Encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences
