Nutritional Biochemistry Tom Brody, 1998-12-21 Nutritional Biochemistry takes a scientific approach to nutrition It

covers not just what nutritional requirements but why they are required for human health by describing their function at the cellular and molecular level. Each case study either leads to a subsequent discovery or enables an understanding of the physiological mechanisms of action of various nutrition-related processes. The text is picture-oriented and the commentary is directed towards explaining graphs, figures, and tables. Nutritional Biochemistry includes a discussion of relevant aspects of physiology, food chemistry, toxicology, pediatrics, and public health. Experimental techniques for nutritional science are emphasized, and primary data is included to help give students a feel for the nutrition literature. This real-world approach provides students with a realistic view of the basis for much of our understanding of nutritional biochemistry. Integrates biochemistry and nutrition in a case-oriented method. Emphasizes a hands-on approach to learning case histories and clinical and research data illustrate all major points. Places emphasis on metabolism, metabolic pathways, enzymology, nutrient requirements including RDA values. Reveals the benefits of the Mediterranean diet, the biochemistry of exercise, the cell signaling pathways, how nutrition can influence the development of cancer, and the anthropometry and genetics of obesity.
