*Airport Marketing* Nigel Halpern, Anne Graham, 2013-06-19 In recent years the airport sector has moved from an industry characterised by public sector ownership and national requirements into a new era of airport management which is beginning to be dominated by the private sector and international players Airports are now complex enterprises that require a wide range of business competencies and skills to meet the needs of their users just as with any other industry Moreover deregulation of air transport markets has made the airport sector much more competitive and given airports greater incentives to develop innovative proactive and aggressive marketing strategies so that they can reap the benefits from these developments New types of airline business model such as low cost carriers have emerged through deregulation which in many cases require a completely different approach to be adopted by airport marketers and have encouraged a further deviation from past practice The travelling public is also becoming more experienced and is generally placing greater demands on the airport operator to deliver a quality product at a time when more stringent controls especially as regards security have been introduced This accessible book fills an important need for an up to date comprehensive and in depth textbook that introduces students and practitioners to the principles and practice of airport marketing as well as the major changes and future marketing challenges facing the airport sector It applies principles of marketing within the airport industry and examines airport marketing and its environment how to define and measure the market for airport services airport marketing planning and individual elements of the airport marketing mix product price promotion and distribution The book integrates key elements of marketing theory with airport marketing in practice Each chapter contains extensive industry examples for different types of airports from around the world to build on the theoretical base of the subject and show real life applications The dynamic nature of the airport industry requires students and practitioners to have a thorough up to date and contemporary appreciation of airport marketing issues and challenges This comprehensive accessible textbook written by two airport marketing experts satisfies this need and is essential reading for air transport students and future managers

The Economic Geography of Air Transportation John T. Bowen, 2010-04-05 Drawing upon hundreds of

mainly secondary sources this book answers three questions how did air transportation develop in the century after the Wright Brothers what does it mean to live in an airborne world and what is the future of aviation in this century **Official Airline Guide**, 1994-07 OAG Business Travel Planner, 1998 *Discrete Choice Modelling and Air Travel Demand* Professor Laurie A Garrow, 2012-10-01 In recent years airline practitioners and academics have started to explore new ways to model airline passenger demand using discrete choice methods This book provides an introduction to discrete choice models and uses extensive examples to illustrate how these models have been used in the airline industry These examples span network planning revenue management and pricing applications Numerous examples of fundamental logit modeling concepts are covered in the text including probability calculations value of time calculations elasticity calculations nested and

non nested likelihood ratio tests etc The core chapters of the book are written at a level appropriate for airline practitioners and graduate students with operations research or travel demand modeling backgrounds Given the majority of discrete choice modeling advancements in transportation evolved from urban travel demand studies the introduction first orients readers from different backgrounds by highlighting major distinctions between aviation and urban travel demand studies This is followed by an in depth treatment of two of the most common discrete choice models namely the multinomial and nested logit models More advanced discrete choice models are covered including mixed logit models and generalized extreme value models that belong to the generalized nested logit class and or the network generalized extreme value class An emphasis is placed on highlighting open research questions associated with these models that will be of particular interest to operations research students Practical modeling issues related to data and estimation software are also addressed and an extensive modeling exercise focused on the interpretation and application of statistical tests used to guide the selection of a preferred model specification is included the modeling exercise uses itinerary choice data from a major airline The text concludes with a discussion of on going customer modeling research in aviation Discrete Choice Modelling and Air Travel Demand is enriched by a comprehensive set of technical appendices that will be of particular interest to advanced students of discrete choice modeling theory The appendices also include detailed proofs of the multinomial and nested logit models and derivations of measures used to represent competition among alternatives namely correlation direct elasticities and cross elasticities
