Philip W. Conkling,1995 Images of the earth s surface have been around for years but it is only recently that scientists have begun to take advantage of new data generated by the explosion of remote sensing equipment to address a variety of technical questions in many different fields This Atlas presents breathtaking full color images of the region to reveal and interpret environmental patterns and problems The illustrations are interwoven with commentary on the area s ecology geology and oceanography giving readers an understanding of the link between their own backyard and the interdependent set of systems that make up one of the most distinctive regions on earth The Gulf of Maine is an almost enclosed sea bounded by an international watershed shaped by volcanoes glaciation and other geologic forces rich in marine resources diverse in terrestrial systems occupied by indigenous peoples for nearly 10 000 years and now used intensively by fishermen foresters and tourists A different aspect of this multi faceted region is discussed in each chapter Yet it is the stunning satellite images and aerial photographs that set the Atlas apart With pinpoint clarity the images demonstrate how these increasingly powerful

sensing tools may be utilized to view and interpret elements of the natural environment and ultimately to help rectify problems In the carefully coordinated narrative essays authors from across the region address issues raised by the images for example how much clear cutting is going on and what its effects are on other parts of the ecosystem how well marine fisheries are managing to prevent overfishing the effect of pollutant loadings in nearshore estuaries and how seaweeds contribute to the lobster harvest
