Sound and Affect Judith Lochhead, Eduardo Mendieta, Stephen Decatur Smith, 2021-04-23 Studies of affect and emotions have blossomed in recent decades across the humanities neurosciences and social sciences In music scholarship they have often built on the discipline's attention to what music theorists since the Renaissance have described as music's unique ability to arouse passions in listeners In this timely volume the editors seek to combine this affective turn with the sound turn in the humanities which has profitably shifted attention from the visual to the aural as well as a more recent philosophical turn in music studies Accordingly the volume maps out a new territory for research at the intersection of music philosophy and sound studies The essays in *Sound and Affect* look at objects and experiences in which correlations of sound and affect reside in music and beyond the voice as it speaks stutters cries or sings music whether vocal instrumental or electronic our sonic environments whether natural or man made and our responses to them As argued here far from being stable correlations of sound and affect are influenced by factors as diverse as race class gender and social and political experience Examining these factors is key to the project which gathers contributions from a cross disciplinary roster of scholars including both established as well as a wealth of new voices The essays are grouped thematically into sections that move from politics and ethics to reflections on pre and post human musicking to the notions of affective listening and music temporalities to an examination of historical understandings of music and affect This agenda setting collection will prove indispensable to anyone interested in innovative approaches to the study of sound and its many intersection with affect and emotions
