A single system usually has limited adjusting ability. In contrast, integrated energy systems such as electricity, gas, electricity, traffic, electricity, heat and transmission distribution coordinated systems enhance the regulating ability of renewable energy accommodation and environmental protection. The operation of

integrated energy systems will meet three essential requirements low pollution attribute robustness and cooperativity However the diversity of uncertainty conditions the complementarity of new energy accommodation among systems the conflict of interest between systems and the dispatch autonomy of systems challenge the requirements mentioned above The main goal of this Research Topic includes 1 Propose more effective trading mechanisms or control strategies for carbon and air pollutant emissions 2 Fully use complementary effects between electric power natural gas heat hydrogen and traffic systems 3 Realize the coordinated operation of integrated energy systems with limited information interaction and ensured dispatch autonomy 4 Improve the robustness of integrated energy systems under diversified uncertainty conditions 5 Apply data based reinforcement learning methods for the dynamic decision of smart integrated energy systems under complex environments Planning, Operation and Control of Modern Power System with Large-scale Renewable Energy Generations, volume II Youbo Liu,Hao Xiao,Xia Lei,Yaser Qudaih ,Xin Zhang,2024-08-13

The rapid development and utilization of renewable energy generations REGs such as wind power and photovoltaic power is an important measure for modern power system to achieve carbon neutrality and solve global energy crisis However the randomness and volatility of renewable energy generations lead to serious reliability concerns and financial risks to different decision makers and the large scale integration of power electronic brings huge challenges to the planning operation and control optimization of renewable energy based systems Therefore to achieve the integration of large scale renewable energy generations advanced planning operation and control optimization methods and strategies for modern power systems are required to be developed based on the state of the art power system technologies The aim of this Research Topic is to report the latest advancements in planning operation and control optimization of large scale renewable energy generations in modern power system to solve potential difficulties and challenges Energy Management in Wireless Cellular and Ad-hoc Networks Muhammad Zeeshan
