Continuous Glucose Monitoring: Beyond Diabetes Management Ma Jianhua, Gang Hu, Jianzhong Xiao, 2025-09-29 Continuous glucose monitoring CGM is considered as a new tool for diabetes management. Due to the improved accuracy and reliability its applications have grown. CGM provides us with an approach for getting insight into blood glucose profiles. Time in range TIR, time above range TAR and time below range TBR become new targets for diabetes care. It helps to optimize the treatment regimen by preventing glucose fluctuation especially hypoglycemia. In this context a lot of studies have been done and many research papers have been published. As we know blood glucose fluctuates during the day not only in patients with diabetes but also in other situations. The fluctuation reflects the balance of disposition of glucose i.e. the appearance of glucose from gut, liver and other glucogenesis tissues and the utilization of glucose. These processes are related to diverse mechanisms and physiological and pathophysiological events. As a result GCM could be used in nutrition consultation, intensive care, prediabetes management, peri-operative care, insulinoma and other diseases related to glucose metabolism. In the discovery of new drugs CGM could be used in animal studies to present a tool to find dynamic glucose metabolism.

Health language English abstract The purpose of this systematic review is to assess how well diet and exercise work in the UK for those who have impaired glucose tolerance in order to prevent type 2 diabetes mellitus. The data was collected using a number of search engines including Ovid MEDLINE, PubMed and Scopus. Research was done using PRISMA criteria. A total of 1200 studies were extracted based on the titles and articles. Upon deeper inspection only nine nevertheless match the necessary data on the acceptability, efficacy and effectiveness of diet and exercise intervention therapy in IGT patients. The main finding that unites all studies is how successful lifestyle changes are at postponing or averting the onset of Type 2 Diabetes T2D. Every study shows how crucial it is to alter one's lifestyle whether it be through dietary changes, regular exercise or culturally relevant therapies in order to reduce the risk of diabetes. The results of multiple studies have come together to show how effective lifestyle changes are in preventing and treating Type 2 Diabetes T2D. The consistently beneficial effects on glucose tolerance which also highlight the therapies potential to postpone the onset of type 2 diabetes due to impaired glucose tolerance attest to their efficacy.
