Enables students to understand power electronics systems as one course in an integrated electric energy systems curriculum  
Power Electronics A First Course provides instruction on fundamental concepts related to power electronics to  
undergraduate electrical engineering students beginning with an introductory chapter and moving on to discussing topics  
such as switching power poles switch mode dc dc converters and feedback controllers The authors also cover diode rectifiers  
power factor correction PFC circuits and switch mode dc power supplies Later chapters touch on soft switching in dc dc  
power converters voltage and current requirements imposed by various power applications dc and low frequency sinusoidal  
ac voltages thyristor converters and the utility applications of harnessing energy from renewable sources Power Electronics  
A First Course is the only textbook that is integrated with hardware experiments and simulation results The simulation files  
are available on a website associated with this textbook The hardware experiments will be available through a University of  
Minnesota startup at a low cost In Power Electronics A First Course readers can expect to find detailed information on  
Availability of various power semiconductor devices that are essential in power electronic systems plus their switching  
characteristics and various tradeoffs Common foundational unit of various converters and their operation plus fundamental  
concepts for feedback control illustrated by means of regulated dc dc converters Basic concepts associated with magnetic  
circuits to develop an understanding of inductors and transformers needed in power electronics Problems associated with  
hard switching and some of the practical circuits where this problem can be minimized with soft switching Power Electronics
