

# NUTRIENT CYCLES

(How are nutrients recycled through ecosystems?)

## Why?

We have learned the importance of recycling our trash. It allows us to use something again for another purpose and prevents the loss of natural resources. But what happens to the waste in nature? Why aren't we up to our necks in poop? Why is there always a supply of water? Why is there oxygen to breathe and carbon dioxide for photosynthesis? Organic compounds in nature are also recycled. This recycling process converts the complex organic compounds to simple, inorganic compounds, which then can be returned to the nutrient cycle and be used in nature again and again.

## Model 1: The Carbon Cycle

1. Name two ways that carbon (usually in the form of CO<sub>2</sub>) enters the atmosphere.
2. What process uses CO<sub>2</sub> from the atmosphere?
3. What organisms carry out that process?
