computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis

Design and Implementation of a Vulkan Engine Fynn Flügge,2019-01-18 Master s Thesis from the year 2018 in the subject Engineering Computer Engineering grade 1 3 Hamburg University of Technology language English abstract The

Vulkan API released in February 2016 is the Khronos Group's answer to Microsoft's Direct3D 12 API published in 2015. Due to the revolutionary capabilities provided by the new API to the programmer, the releases were accompanied by an enormous hype. Vulkan and Direct3D 12 provides the programmer unprecedented control and empowerment over the GPU and its memory which might introduce a new era in GPU computing. This elaboration deals with the design and implementation of a graphic engine along with state of the art rendering features using the Vulkan API. The Vulkan engine is built upon the OpenGL engine Oreon Engine developed in a previous work and used in the research elaboration Realtime GPGPU FFT Ocean Water Simulation. Further an extensive study concerning the capabilities of the new Vulkan API and its performance advantage compared to OpenGL is demonstrated.

Build a Large Language Model (From Scratch) Sebastian Raschka,2024-10-29 Learn how to create, train and tweak large language models LLMs by building one from the ground up. In *Build a Large Language Model from Scratch* bestselling author Sebastian Raschka guides you step by step through creating your own LLM. Each stage is explained with clear text diagrams and examples. You'll go from the initial design and creation to pretraining on a general corpus and on to fine tuning for specific tasks. *Build a Large Language Model from Scratch* teaches you how to Plan and code all the parts of an LLM. Prepare a dataset suitable for LLM training. Fine tune LLMs for text classification and with your own data. Use human feedback to ensure your LLM follows instructions. Load pretrained weights into an LLM. *Build a Large Language Model from Scratch* takes you inside the AI black box to tinker with the internal systems that power generative AI. As you work through each key stage of LLM creation you'll develop an in depth understanding of how LLMs work, their limitations and their customization methods. Your LLM can be developed on an ordinary laptop and used as your own personal assistant. About the technology. Physicist Richard P Feynman reportedly said "I don't understand anything, I can't build." Based on this same powerful principle bestselling author Sebastian Raschka guides you step by step as you build a GPT style LLM that you can run on your laptop. This is an engaging book that covers each stage of the process from planning and coding to training and fine tuning. About the book. *Build a Large Language Model From Scratch* is a practical and eminently satisfying hands on journey into the foundations of generative AI. Without relying on any existing LLM libraries you'll code a base model, evolve it into a text classifier and ultimately create a chatbot that can follow your conversational instructions. And you'll really understand it because you built it yourself. What's inside. Plan and code an LLM comparable to GPT 2. Load pretrained weights. Construct a complete training pipeline. Fine tune your LLM for text classification. Develop LLMs that follow human instructions. About the reader. Readers need intermediate Python skills and some knowledge of machine learning. The LLM you create will run on any modern laptop and can optionally utilize GPUs. About the author. Sebastian Raschka PhD is an LLM Research Engineer with over a decade of experience in artificial intelligence. His work spans industry and academia including implementing LLM

solutions as a senior engineer at Lightning AI and teaching as a statistics professor at the University of Wisconsin Madison Sebastian collaborates with Fortune 500 companies on AI solutions and serves on the Open Source Board at University of Wisconsin Madison He specializes in LLMs and the development of high performance AI systems with a deep focus on practical code driven implementations He is the author of the bestselling books Machine Learning with PyTorch and Scikit Learn and Machine Learning Q and AI The technical editor on this book was David Caswell Table of Contents 1
