## **Viral Challenge Review:**

Pandemic Response: Challenges, Advances, and Lessons Learnt Brent M. Egan, Eva Lee, Duane Caneva, 2025-10-30 SARS CoV 2 has unleashed the pandemic of the century inflicting over a million deaths in the United States and over six million deaths worldwide since it was first reported in December 2019 COVID 19 the disease caused by SARS CoV 2 overwhelmed healthcare systems paralyzed the global economy set back education disrupted the supply chain and traumatized every fiber of critical infrastructure in society In developing countries COVID 19 set back decades of progress in fighting hunger poverty illiteracy and childhood health protection via vaccination Although substantial resources have been invested in pandemic preparedness and response it is clear that the world was not prepared for COVID 19 as public health leaders ignored warnings and failed to convert their level of preparedness into timely actions for early disease containment and effective mitigation Nonetheless this devastating crisis triggered unparalleled and critical scientific advances including novel diagnostic testing and drug design advances in clinical treatment and rapid vaccine development As we continue to fight the virus variants work to reduce the burden of illness and curb transmission globally to end the pandemic we must understand and investigate the challenges advances and lessons learned in order to better prepare and protect humanity against the next pandemic While countries have varied significantly in their available resources and application of public health measures to combat the spread of the virus this pandemic clearly shows that a country's wealth does not necessarily secure the health of its citizens A successful pandemic response demands decisive leadership and look ahead system competence The pandemic crisis calls for a reassessment that leads to innovation in public health disaster medicine This presents a clear opportunity for building a resilient society and infrastructure by drawing from successful actions and lessons learned from every part of the world The number of infectious disease outbreaks has been accelerating many of which have pandemic potential These disease outbreaks constitute a major global risk and require coordinated and decisive actions across all countries Public health must seize the moment as the COVID 19 pandemic offers a wealth of lessons for reassessment and innovation to build a better and sustained health security future This research topic seeks original research on topics related to the challenges scientific advances clinical and basic science and lessons learned during the COVID 19 crisis Examples of such topics include Optimizing constrained resources e.g. redesigning ventilators for multiple patient usage decontaminating N95 masks pooling for tests etc Novel drug and treatment discovery Rapid vaccine design Operations and systems redesign e.g. contact tracing mass screening and vaccination adapting clinical facilities alternative care delivery and manufacturing bottlenecks Tradeoffs and impact of various public health policies and response actions in mitigating the pandemic We expect authors from the following range but not limited to 1 Scientists and clinicians who succeeded in advancing ventilator usage by making it for multiple people to share one 2 Scientists who have succeeded in decontaminating the N95 so that it can be used for 21 days instead of 1 day 3 Hospital leaders who succeeded in adapting the clinical environment so that it can adapt to the maximum

number of patients being agile and being able to protect their workers 4 mRNA technology how it overcomes the time hurdle to roll out at such rapid speed 5 How local strike teams raced through the limited resources and time and managed to vaccinate as many people as possible

*Advances and Insights in the Diagnosis of Viral Infections and Vaccines Development in Animals* Jingqiang Ren, Hongliang Chai, Lihua Wang, Jianke Wang, Hewei Zhang, 2024-07-09 Viral infections in animals occasionally develop potentially fatal diseases that affect almost all organs Especially in zoonotic diseases the causative agents that usually exist in animals can be transmitted between animal species to humans directly or via a vector Throughout recent history disease outbreaks and pandemics including SARS H7N9 Ebola and COVID 19 have led to a dramatic loss of human life worldwide and harmed economic growth The most effective strategies for the control of disease are vaccination and early diagnosis Vaccines directed against viral and bacterial pathogens prevent catastrophic losses of life in humans other animals and plants and are considered among the greatest public health achievements Rapid and accurate detection of pathogens and identification of the aetiologic agent play a crucial role at every step of disease management In the case of zoonotic illnesses early detection of wildlife aids in the establishment of a surveillance system allowing for the introduction of efficient and timely disease control interventions to prevent transmission from animal to human At present variations and deletions in the genome of the virus are of common occurrence during evolution coupled with the new emerging disease and cross species disease transmission which are increasing the potential for the transmissibility and severity of the disease For this reason developing safe and effective vaccines and enhancing the sensitivity and specificity of the diagnostic methods are urgently required The scope of this research topic will share and discuss findings in the areas of diagnosis of viral diseases or vaccine development for all animal species including terrestrial and aquatic mammals fishes insects birds etc

**Immune studies of SARS-CoV2 and vaccines using preclinical modeling** William Murphy, Cordelia Dunai, Smita S. Iyer, 2025-01-28 The world wide pandemic involving SARS CoV2 in which high infectivity and pathogenesis necessitated the critical need for rapid and accurate preclinical modeling of this new virus Unfortunately the species restricted tropism of the CoV2 spike protein towards human and not mouse ACE2 seriously hampered the ability to understand pathogenesis and potential efficacy of potential therapeutics and vaccines Vaccine responses are particularly imperative given the likely need for continuous vaccine administration and viral evasion processes This barrier necessitated the development of genetically altered mouse models or

adapting the virus to infect murine cells The immune responses underlying SARS CoV2 infection are complex as are the immunopathology associated with infection and resolution in which multiple organs and tissues are affected This is highlighted by the occurrence of prolonged pathology and symptoms termed Long Covid well after resolution of infection and also coupled with the high mutation rate of the virus Preclinical models allow for mechanistic dissection of the pleiotropic effects of the virus as well as vaccine responses These can include mouse models but also involve non human primate models all of which have advantages but limitations that must be considered when extrapolating to humans Preclinical models may also include in vitro modeling components Moving Towards Allogeneic Cellular Therapies: Opportunities and Challenges
