*Reference Book* Thomas Roy Crompton,1996 Crompton s Battery Reference Book has become the standard reference source for a wide range of professionals and students involved in designing manufacturing and specifying products and systems that use batteries This book is unique in providing extensive data on specific battery types manufacturers and suppliers as well as covering the theory an aspect of the book which makes an updated edition important for every professional s library The coverage of different types of battery is fully comprehensive ranging from minute button cells to large installations weighing

several hundred tonnes Must have information and data on all classes of battery in an accessible form Essential reference for design engineers in automotive and aerospace applications telecommunications equipment household appliances etc Informs you of developments over the past five years *Design Optimization of the Electrically Peaking Hybrid (ELPH) Vehicle* M. Ehsani, Yimin Gao, K. Butler, 1998 Electrically Peaking Hybrid ELPH is a parallel hybrid electric vehicle propulsion concept that was invented at Texas A M University by the advanced vehicle systems research group Over the past six years design methodologies component development and system optimization work has been going on for this invention This project was a first attempt in integrating the above developments into an optimized design of an ELPH passenger car Design specifications were chosen for a full size passenger car performing as well as any conventional car over the EPA FTP 75 combined city highway drive cycles The results of this design project were two propulsion systems Both were appropriate for commercial production from the point of view of cost availability of the technologies and components One utilized regenerative braking and the other did not Substantial fuel savings and emissions reductions resulted from simulating these designs on the FTP 75 drive cycle For example our ELPH full size car with regenerative braking was capable of delivering over 50 miles per gallon in city driving with corresponding reductions in its emissions This project established the viability of the ELPH concept and the design methodologies in computer simulations More work remains to be done on investigating more advanced power plants such as fuel cells and more advanced components such as switched reluctance motor drives for the designs Furthermore the design optimization can be carried out to more detailed levels for prototyping and production

**Forschung Stadtverkehr des Bundesministers für Verkehr**, 1981 *Alternative Fuels for Road Vehicles* Mark L. Poulton, 1994 The many alternative fuels that have been reviewed in this book are likely to be of great interest to a broad readership not only to mechanical petrochemical and transportation engineers but anyone with a technical association with the subject The book covers fuels for the motor vehicle and how they may develop and change in the future Prospects for conventional petrol and diesel fuels are discussed including their reformulation as well as synthetic fuels vegetable oils and other biofuels alcohols gases LPG natural gas and hydrogen and electricity This book has been published as a consequence of a programme of study commissioned by the Chief Mechanical Engineer's Office at the UK Department of Transport into the contribution of the road vehicle to global warming A programme of research was placed with the Environment Centre of the Transport Research Laboratory and one of the individual projects was to investigate the future prospects for conventional and alternative fuels for road vehicles Implications for the energy and emissions from the whole fuel cycle from production to distribution and final usage were considered but more importantly the vehicular fuel consumption and consequent carbon dioxide emissions and exhaust emission characteristics were the primary focus of attention The structure of this book is such that each chapter describes a particular alternative fuel and is completely self contained The reader will be able to cover a particular subject that is of interest without having to refer to other chapters to gain a full understanding of the fuel s

characteristics notable developments and demonstration programmes underway worldwide One chapter chapter 10 does provide an overview and inter comparison of all the fuels discussed including point of use and life cycle emissions global warming impacts fuel storage implications and likely costs Future advances in conventional engines and the development of alternative power units are discussed in the companion volume to this book Alternative Engines for Road Vehicles The future prospects for a range of engines including conventional petrol and diesel fuelled units covering technologies such as two stroke lean burn and stratified charge the rotary engine gas turbine Stirling Rankine steam engine and hybrids are assessed for their potential to reduce vehicle emissions and improve fuel economy Other less well known concepts such as catalytic combustion the Quadratic beam engine stepped piston and other engine efficiency techniques are also reviewed Book Jacket
