Origins of the Social Mind Shoji Itakura, Kazuo Fujita, 2009-02-11 During the first few years of life children acquire knowledge about the relationships between their own mental states their actions and the social world This information is then used to understand themselves and others Humans are born into families where they are raised and learn to cooperate compete and communicate We are social creatures and over the course of development we learn about people relationships social systems and others' minds In addition not only do we live socially we think socially as well However human adults are not the only creatures to live and think socially In recent years sophisticated experiments have provided new information about social cognition in human infants and nonhuman animals In this book we focus on the developmental and evolutionary origins of the social mind bringing together the currently segregated views on social cognition in the two fields Ever since the term theory of mind was coined by D Premack nearly 30 years ago the concept has been the main topic of

social cognition research both in developmental psychology and in primatology. However, few attempts have been made to integrate these two research domains. Just recently, researchers from the two areas collaborated to publish a book on this topic, but the volume was little more than a collection of independent papers. This book overcomes that limitation by presenting new data and their implications from both developmental and evolutionary points of view.
