## **Orion Equatorial Mount Manual:**

*Astrophotography on the Go* Joseph Ashley, 2014-10-03 No longer are heavy sturdy expensive mounts and tripods required to photograph deep space. With today's advances in technology all that is required is an entry DSLR and an entry level GoTo telescope. Here is all of the information needed to start photographing the night sky without buying expensive tracking mounts. By using multiple short exposures and combining them with mostly freeware computer programs the effect of image rotation can be minimized to a point where it is undetectable in normal astrophotography even for a deep sky object such as a galaxy or nebula. All the processes, techniques and equipment needed to use inexpensive lightweight altazimuth and equatorial mounts and very short exposures photography to image deep space objects are explained step by step in full detail supported by clear easy to understand graphics and photographs. Currently available lightweight mounts and tripods are identified and examined from an economic versus capability perspective to help users determine what camera telescope and mount is the best fit for them. A similar analysis is presented for entry level telescopes and mounts sold as bundled packages by the telescope manufacturers. This book lifts the veil of mystery from the creation of deep space photographs and makes astrophotography affordable and accessible to most amateur astronomers. **Star Ware** Philip S. Harrington, 2011-02-25

Praise for Star Ware Star Ware is still a tour de force that any experienced amateur will find invaluable and which hardware minded beginners will thoroughly enjoy. Robert Burnham Sky distributors, dealers and conventions and corporate listings for products and services. **Choosing and Using a Dobsonian Telescope** Neil English, 2011-07-25 In the 1960's American amateur astronomer John Dobson designed a revolutionary kind of astronomical telescope featuring a lightweight large aperture reflecting system on a simple mounting using the then revolutionary material called teflon. The design combines simplicity and portability with large aperture prowess. Thirty years later Dobsonians remain supreme for visually observing faint deep sky objects and are one of the best selling large telescopes in the USA and Europe. This popularity is reflected in the recent increase of companies now heavily marketing Dobsonians in particular Meade the Lightbridge range Orion USA XT Intelliscope series and Skywatcher Skyliner and Flextube models. This book is the ultimate guide to buying and using commercial Dobsonians both Econo and Primo models with in depth accounts for the various models plus accessories on the market and descriptions of the many innovations that amateurs have made to optimize their telescopes performance.
