

Halliburton Otis® B Positioning (Shifting) Tool

The Halliburton Otis® B Positioning (Shifting) Tool is designed to move the inner sleeve to its open or closed position in the type XA, RA, XO, and XD Halliburton Otis® Sliding Side-Door® circulating sleeve.

The positioning tool engages the recess in the upper or lower end of the sleeve to enable the sleeve to be shifted by a jarring action. The tool is designed to release itself only after the sleeve reaches its fully open or closed position. This automatic releasing feature incorporates a releasing profile on the key itself and acts to compress the key spring and release the positioning tool.

If the sleeve does not move its full travel (no contact enabling the profile to release the positioning tool), then a shear enables the keys to collapse into the top sub.

Selective keys are available that do not incorporate the release profile and rely solely on the shear pin as the release mechanism. These are used on completions with multiple XA or RA sliding sleeves and the operator must open a lower sleeve without disturbing sleeves above.

Caution: The Halliburton Otis® B Positioning (Shifting) Tool will not pass through a Position 1#, type S landing nipple.
