this book with the inspiration to develop a more comprehensive research method to assess buildings Analysing Buildings  
from Context to Detail in time ABCD Research Method Technology at academic level should be considered in the analysis of a  
building In this book the focus is on construction engineering the study of the requirements associated with constructing  
buildings Providing information on practice is a key element in construction engineering which is a learning process Changes  
are made during the life of a building and they might be made differently if the history and technical aspects of the building  
were studied in greater detail Both maintenance and changes require us to understand the building concerned De

renown with transparent sustainable and technologically progressive architecture that is remarkably usable and humane  
Unaffected design sober but stylish materialization and careful finishing are just as characteristic of Cepezed's oeuvre as the  
integration of spatial and construction technical aspects The design and building processes at cepezed are also integrated  
the use of prefabricated components and the application of industrial building methods guarantee an optimum alignment of design  
and realization in which time quality and costs are meticulously planned and controlled Prototypes documents a large  
number of key projects and deals extensively with the various aspects of product development building process and  
architecture The layout and form of the book make it very similar to a cepezed design clear logical and efficient It offers very  
insightful insight into the office philosophy that cepezed has drawn straight through architectural history In addition to the  
timeless aesthetic pleasure that can be experienced in the designs and the craftsmanship displayed at detail level the much  
discussed role of the architect in the design process today is examined in the book A must read for every architect who
