Mathematics often gets a bad press Describing someone as calculating or rational is hardly as flattering as being labelled artistic or creative and mathematicians in movies or novels are often portrayed as social misfits who rarely get the guy or girl No wonder some folks say oh I don t care for mathematics I was never any good at it with a wistful sense of pride Yet professional mathematicians talk of the subject differently They look for elegant solutions to problems revel in playing around with mathematical ideas and talk of the creative nature of mathematics As the Russian mathematician Sophia Kovalevskaya said It is impossible to be a mathematician without being a poet in soul So why is there such a gap between the views of everyday folks and professional mathematicians Part of the problem lies in how most of us were taught mathematics in school The mathematics served up there is presented as a series of de contextualised abstract ideas wrested from the human struggles and interactions that gave birth to the ideas Through looking at some of the history of mathematics psychological studies into how we come to know mathematics and key ideas in mathematics itself the intent of this book is if not to make the reader fall in love with mathematics then at least to come to understand its nature a little better and perhaps care a little more for it In short this book explores the human side of maths *Learning and Teaching Mathematics in The Global Village*

Marcel Danesi,2016-04-29 This book provides a fundamental reassessment of mathematics education in the digital era It constitutes a new mindset of how information and knowledge are processed by introducing new interconnective and interactive pedagogical approaches Math education is catching up on technology as courses and materials use digital sources and resources more and more The time has come to evaluate this new dynamic which transcends all previous use of ancillary devices to supplement classroom math instruction Interactivity and interconnectivity with the online world of math and math texts such as television programs and internet sites can be integrated with our traditional modes for delivery of math instruction This book looks at how this integration can unfold practically by applying these relevant pedagogical principles to elementary topics such as numeration arithmetic algebra story problems combinatorics and basic probability theory The book further exemplifies how mathematics can be connected to topics in popular culture information technologies and other such domains *Research in History and Philosophy of Mathematics* Maria Zack,Elaine Landry,2016-12-15 This volume

contains seventeen papers that were presented at the 2015 Annual Meeting of the Canadian Society for History and Philosophy of Mathematics La Soci t Canadienne d Histoire et de Philosophie des Math matiques held in Washington D C In addition to showcasing rigorously reviewed modern scholarship on an interesting variety of general topics in the history and philosophy of mathematics this meeting also honored the memories of Jacqueline Jackie Stedall and Ivor Grattan Guinness

celebrated the Centennial of the Mathematical Association of America and considered the importance of mathematical communities in a special session. These themes and many others are explored in these collected papers which cover subjects such as New evidence that the Latin translation of Euclid's Elements was based on the Arabic version attributed to al-ajjāj. Work done on the arc rampant in the seventeenth century. The history of numerical methods for finding roots of nonlinear equations. An original play featuring a dialogue between George Boole and Augustus De Morgan that explores the relationship between them. Key issues in the digital preservation of mathematical material for future generations. A look at the first twenty five years of The American Mathematical Monthly in the context of the evolving American mathematical community. The growth of Math Circles and the unique ways they are being implemented in the United States. Written by leading scholars in the field these papers will be accessible to not only mathematicians and students of the history and philosophy of mathematics but also anyone with a general interest in mathematics.
