The Therapeutic Value of Adventure Paul Sgoutas,2017 Objectives This study was created to explore the therapeutic value of adventure activity and how awareness of the potential benefits affects motivation to participate Methods An online survey was sent through emails and social media and interviews were completed over the phone A mixed methods research design was used The qualitative data was used to identify trends from a wide range of

individuals own experiences with adventure. The quantitative data was used to compare both desire and intention from the beginning of the survey to the end. Participants were adults living in the U.S. with access to the internet. Results: There were 251 responses to the survey with about 50 different forms of adventure activity identified by participants. The results indicated that the more an adventure activity includes the five identified values: exercise, community, and friendship, building, overcoming challenges, healthy risk taking, and being in nature, the more therapeutic people experienced those activities to be. Many participants reported that they could generalize the benefits derived from adventure activity to their everyday life. Respondents identified with a wide range of struggles including anger, anxiety, mental illness, and physical illness, and nearly all affirmed that participation in adventure activities has helped them with those struggles in some way. Conclusions: Educating individuals about the therapeutic value of adventure and facilitating their experience of flow within the context of adventure could be an important piece in the overall picture of what increases and sustains their well-being. **Playing Roblox** (Josh Gregory, 2020) Roblox is more than just a video game.
