It addresses the critical need for intelligent crop management in light of the world s escalating population. Encompassing a spectrum of technologies including computer vision image processing soft computing machine learning and deep learning the book explores advancements in decision making systems. It integrates data science methodologies Internet of Things wireless communications and a range of sensors and actuators to provide precise timely and cost effective solutions to agricultural challenges ultimately enhancing both the quality and quantity of crop yields. The book empowers its audience to direct their efforts towards designing models and prototypes that benefit society and the environment making it an indispensable resource for those eager to shape the future of intelligent agriculture. It serves as a comprehensive guide for students scholars and academicians keen on delving into the transformative field of artificial intelligence in agriculture. Researchers scientists and field experts will find invaluable insights to guide their exploration and contribution to this domain.

[\*\*A 360-Degree View of IoT Technologies\*\*](#) John Soldatos,2020-12-31 This exciting book explores the past present and future of IoT presenting the most prominent technologies that comprise IoT applications including cloud computing edge computing embedded computing Big Data Artificial Intelligence AI blockchain and cybersecurity. A comprehensive description of the full range of the building blocks that comprise emerging IoT systems and applications is provided while illustrating the evolution of IoT systems from the legacy small scale sensor systems and wireless sensor networks to today s large scale IoT deployments that comprise millions of connected devices in the cloud and smart objects with semi autonomous behavior. It also provides an outlook for the future evolution of IoT systems based on their blending with AI and the use of emerging technologies like blockchain for massively decentralized applications. The full spectrum of technologies that are closely associated with the term IoT since its introduction are explored. The book also highlights the main challenges that are associated with the development and deployment of IoT applications at scale including network connectivity security and interoperability challenges. First tech sensors wireless sensor networks and radio frequency identification RFID tags are covered. Machine learning big data and security issues are also explored. [\*\*Near Infrared\*\*](#)

**Detectors Based on Silicon Supersaturated with Transition Metals** Daniel Montero Álvarez, 2021-01-08 This thesis makes a significant contribution to the development of cheaper Si based Infrared detectors operating at room temperature. In particular the work is focused in the integration of the Ti supersaturated Si material into a CMOS Image Sensor route the technology of choice for imaging nowadays due to its low cost and high resolution. First the material is fabricated using ion implantation of Ti atoms at high concentrations. Afterwards the crystallinity is recovered by means of a pulsed laser process. The material is used to fabricate planar photodiodes which are later characterized using current voltage and quantum efficiency measurements. The prototypes showed improved sub bandgap responsivity up to 0.45 eV at room temperature. The work is further supported by a collaboration with STMicroelectronics where the supersaturated material was integrated into CMOS based sensors at industry level. The results show that Ti supersaturated Si is compatible in terms of contamination process integration and uniformity. The devices showed similar performance to non implanted devices in the visible region. This fact leaves the door open for further integration of supersaturated materials into CMOS Image Sensors.
